Tackling Informality

JOBS AND MIGRATION CORE COURSE
MAY 4, 2018

Elizabeth Ruppert Bulmer
eruppertbulmer@worldbank.org
1. What do we mean by informality?
   - informal sector...informal jobs...informal firms
   - Which occupations and sectors are most affected by informality?
   - Which types of workers tend to work informally?

2. What data and tools can be used to measure informality and assess “how big is the problem”?

3. What are the economic and welfare costs associated with informality?

4. How can we design policies to mitigate these costs?
   - formalizing...incentivizing...improving informal job quality
Which of these depict informal work and which are formal?
By what criteria do we define informal?

Break-out 1:

Discuss the ways in which informality can be defined, and how it is defined in your countries

1. List definition options
2. List the most commonly used definition (within your countries)
3. Report back
## Defining what we mean by “informal”

<table>
<thead>
<tr>
<th>Informality Definition</th>
<th>Criteria</th>
<th>Measurement Indicator</th>
<th>Data Source</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Registration with tax authorities</strong></td>
<td>Informal if worker or firm is unregistered, or if worker works in an unregistered firm</td>
<td>Does not have a registration or tax ID number</td>
<td>Firm registry</td>
</tr>
<tr>
<td><strong>Social insurance coverage and labor protections</strong></td>
<td>Informal if not covered by social insurance. Includes undeclared employees of a registered firm; employers or self-employed not paying into social insurance for themselves; workers in part-time or fixed-term jobs that do not provide paid sick leave, mandatory holidays, or firing or freedom of association protections.</td>
<td>Does not make social security contributions; or does not have a right to a pension.</td>
<td>Administrative data: Social insurance fund list of beneficiaries; Household or labor force survey data: question on access or contribution to a pension</td>
</tr>
<tr>
<td><strong>Firm size</strong></td>
<td>Informal if worker is self-employed or small firms with less than the threshold number of employees (typically ≤ 5) (or employee of a small firm)</td>
<td># of employees working at current employer</td>
<td>Firm census; firm registry (formal only); firm survey; some household/labor force surveys have a question on firm-size</td>
</tr>
<tr>
<td><strong>Productivity/Output</strong></td>
<td>Informal if firm has low turn-over, e.g., less than threshold level of annual output per worker, or threshold of annual firm sales</td>
<td>Level of output/worker or sales at current firm of employment</td>
<td>Administrative data from tax authority; firm census; firm surveys</td>
</tr>
<tr>
<td><strong>Contract type</strong></td>
<td>Informal if no written contract; temporary contract; some types of fixed-term contract (determines degree of informality)</td>
<td>Lacks a contract, non-standard terms of written contract</td>
<td>Household or labor force survey data</td>
</tr>
<tr>
<td><strong>Location</strong></td>
<td>Informal if no fixed work premises outside the home</td>
<td>Home-based work</td>
<td>Household survey data; informal sector/household enterprise surveys</td>
</tr>
</tbody>
</table>
Some global estimates...
Informality is pervasive in the developing world

Informal employment comprises all workers of the informal sector (in unregistered firms) and informal workers outside the informal sector (own-account workers, and employees not contributing to social security, paying income taxes, or who lack certain benefits such as family leave or sick leave).

Source: ILOSTAT.
Informality rates vary by country income level, and depend on the structure of economy (and data!)

Even economies transitioning from traditional agric. to manf. and a vibrant services sector have high shares of informal employment because many services are low-value, delivered by low-productivity micro-firms or the self-employed.

Source: Filmer and Fox et al. (2014), Honorati and Johansson de Silva (2016)
Different informality definitions yield different rates (% of wage workers, LAC)

Source: WBG estimates using SEDLAC data
Measurement challenges
(both within a country, or for comparing across countries)

• Household and labor force survey data coverage, quality (sample, implementation, data coding/recording/cleaning, timeliness)

• Differences in regulations and therefore formality definition: in a registered firm or access to a pension or contract type (open, written)

• Uniformity of questionnaires (education categories: Africa vs. LAC some tertiary vs. tertiary complete)

• Primary occupation vs. all occupations; monthly wages and hours worked vs. hourly wages

• Incomplete administrative data (NA, employment) due to under-reporting → poor estimates of labor productivity

• Easily observable: firm size, firm sales ... but evasion can distort measurement.
  Moreover, where institutions are weak, evasion and data quality are worse

• Firm data that does not distinguish between different types of workers (full vs. part-time, skill vs. unskilled) and total wage bill – hard to measure firm productivity
How is informality addressed in the Jobs Diagnostics?

1. **Macro structural tool**

   Data: employment levels over time (by sector, region, formality); national accounts data (sector, region, formality...I/O tables)

   *Q: Has structural transformation led to more or less informality? productivity implications?*

2. **Labor supply analysis**: *how many informal, where are they, what characteristics, welfare implications*

   Data: HH survey or LFS micro data on individual characteristics (education, gender, age) and job characteristics (earnings, work status, formality)

   *Q: How are labor outcomes of informal workers different from formal (productivity, quality, access)?*
How is informality addressed in the Jobs Diagnostics?

3. Labor demand analysis:

Data: firm census or firm surveys including unregistered firms

❖ How are firms’ output levels, employment (by skill, gender), wages, inputs (K, L, training) and productivity levels linked to formality?

Q: Which types of firms are creating jobs: young/old? small or large? formal of informal? in which sectors? more or less productive?
Which types of jobs tend to be informal?
Which types of workers tend to be informal? Which types of firms?

Break-out 2:
Discuss the characteristics of informal jobs, and the characteristics of informal workers

1. List common characteristics of informal jobs (i.e., job attributes)
2. List common characteristics of informal workers (i.e., individual attributes)
3. List common characteristics of informal firms (i.e., firm attributes)
4. Report back top 3 in each
Job attributes? Individual attributes? Firm attributes?
Some evidence...
Workers in poor households have higher informality rates (Paraguay, Logit regressions)

% age point gaps in labor market outcomes: top 60% of households minus bottom 40% of households, Paraguay

Source: Paraguay Jobs Diagnostic (Ruppert Bulmer et al. 2017)
More likely to be informal:

- Youth
- Women
- Indigenous
- Less educated
- Rural
- Agric, construction, services
- Self-employed

Source: Paraguay Jobs Diagnostic (Ruppert Bulmer et al. 2017)
Global evidence: Youth Are More Likely to be Under-employed (% in part-time work)

Source: ILO (2016b); computations based on OECD STAT
Rural Workers Have Higher Rates of Informality: Evidence from LAC

Productivity too low to afford the minimum wage

Firms in Paraguay

Q: Why do we care?

A: Because informality leads to inequity and is costly!

- **Workers’ welfare**: informal workers tend to be poor, have low and unstable earnings, and may be exposed to unsafe working conditions, lack voice and agency, and are not insured against income shocks.

- **Economic and human development**: under-employed are under-utilized, and have earnings too low to invest in their children’s HK (especially women).

- **Efficiency costs**: informal workers have lower productivity, lower incomes, low investment, reduced fiscal revenues and underfunded social insurance -> slower economic growth (directly and indirectly).

- **Social stability**: under-employment of youth or in vulnerable/marginal communities can have negative social externalities such as high crime/gang activity/alcohol and drug abuse.

- **Governance**: trust in institutions and in government’s capacity to deliver quality services and enforce regulations (high evasion undermines governance).

*These factors are intertwined*
Many factors contribute to informality

• **Market distortions**
  E.g., labor regulations and labor taxes (too high → segmentation), business regulations

• **Institutional weaknesses**
  E.g., weak enforcement, inefficient tax collection, gaps in social insurance eligibility/access

• **Market failures**
  E.g., mismatch of labor supply and demand (due to constrained labor mobility, misaligned education/training curricula with private employers, inadequate labor market information systems); weak property rights (which limit access to finance); poor infrastructure (limited access to markets, electricity, public security – keeping costs high)

• **Inequality of opportunity**
  E.g., low levels of HK (education/health access), constrained credit access, distance to markets, discrimination

*Policies need to address the root causes*
Challenge: Cannot simply formalize all informal workers

Policies for addressing informality/mitigating the costs of being informal can be grouped under 5 broad objectives:

<table>
<thead>
<tr>
<th>1. Reduce the regulatory gap between formal and informal</th>
<th>Tax wedge; de-link SI from employment contract; replace severance with Unemployment Benefits; MW; registration costs</th>
</tr>
</thead>
</table>
| 2. Increase incentives to formalize                      | **Carrots:** access to credit or training; precondition for importing/exporting  
**Sticks:** improve enforcement, labor inspections  
**Governance:** confidence in the state |
| 3. Raise the productivity of informal jobs and informal firms | Training (technical skills, management and business practices, entrepreneurship); connecting micro firms to lead firms/value chains; connecting producers to larger markets |
| 4. Increase the quality of informal jobs                 | Increase worker voice through informal worker organizations and collective bargaining for better working conditions (e.g., domestic workers) |
| 5. Improve workers’ ability to access better or formal jobs | Labor mobility; labor information and matching services; education/training targeting marginal groups (e.g., rural, women) |
1. Discuss which informal workers are the neediest/highest priority in your countries, clarifying the criteria for prioritizing

[e.g., need can be defined on the basis of welfare gaps, role in economic growth, sector size or growth potential]

2. Discuss policies to improve job quality for these priority groups

3. For a selected policy, list challenges for measuring how many, targeting the policy, and incentivizing workers/firms in these groups (e.g., potential sources of failure/mis-targeting/poor incentives)

4. Each group presents one example for discussion
### Policy interventions for addressing informality

<table>
<thead>
<tr>
<th>Causes</th>
<th>Reduce regulatory gap between formal and informal</th>
<th>Increase incentives to formalize</th>
<th>Raise productivity of informal jobs/firms</th>
<th>Increase quality of informal jobs</th>
<th>Improve workers’ ability to access better/formal jobs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reduce/simplify regulations to register a firm, export/import, pay taxes (e.g., single window/electronic processing)</td>
<td>Reduce labor tax wedge</td>
<td>Increase benefits of registering, such as through:</td>
<td>Trade policies to increase access to better inputs and bigger markets</td>
<td></td>
<td>Review public procurement rules to accommodate small suppliers</td>
</tr>
<tr>
<td>Reduce layoff requirements</td>
<td>Reduce layoff requirements</td>
<td>- access to small business grants</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Allow flexible fixed-term contracts</td>
<td>Reduce limits on working hours (subject to overtime), night-time work</td>
<td>- business services training</td>
<td>- automated customs procedures</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Conducive macro policy</td>
<td>Balance corporate and individual tax rates</td>
<td>- quality, standards accreditation services</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Non-distortionary trade policy</td>
<td>Conducive macro policy</td>
<td>- employment or recruitment services</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Reduce land market distortions</td>
<td>Non-distortionary trade policy</td>
<td>- access to wage subsidies</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Reduce land market distortions</td>
<td>Increase perceived value or reliability of social security benefits</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Increase sanctions for not registering (penalties for tax evasion, regulatory violations)</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Market distortions**

- Access to small business grants
- Business services training
- Automated customs procedures
- Export promotion services
- Aggregated service delivery
- Specialized vocational training
- Quality, standards accreditation services
- Employment or recruitment services
- Access to wage subsidies
- Increase perceived value or reliability of social security benefits
- Increase sanctions for not registering (penalties for tax evasion, regulatory violations)
## Policy interventions for addressing informality

<table>
<thead>
<tr>
<th>Causes</th>
<th>Reduce regulatory gap between formal and informal</th>
<th>Increase incentives to formalize</th>
<th>Raise productivity of informal jobs/firms</th>
<th>Increase quality of informal jobs</th>
<th>Improve workers' ability to access better/formal jobs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weak institutions</td>
<td>Increase government outreach to inform the public of registration requirements, and provide accessible administrative assistance to register.</td>
<td>Strengthen enforcement of tax compliance</td>
<td></td>
<td>Strengthen the setting and enforcement (labor inspections) of workplace safety and labor standards appropriate to scale of informal activities</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Increase intergovernmental coordination and cross-check VAT/customs/profit taxes</td>
<td></td>
<td></td>
<td>Increase dissemination and advocacy of user-friendly information on workers’ rights, workplace safety, government programs targeting vulnerable groups</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Increase government credibility to deliver future social insurance benefits</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>

Questions?
Thank you!
Defining a “good” job: is this the same thing as being formal?

❖ ILO (rights-based focus): worker protections, SI, workplace safety, voice, collective bargaining → formal or hidden formal (Non-Standard Employment report)

❖ Overlap with ILO’s *decent work* concept: “work that is productive and delivers a fair income, security in the workplace and social protection for families, better prospects for personal development and social integration, freedom for people to express their concerns, organize and participate in the decisions that affect their lives and provide equality of opportunity and treatment for all women and men”

❖ Advanced economies (productivity/growth focus): ICT or high tech job

❖ Segmented/distorted economies: government job
Defining a “good” job from the development perspective

❖ World Bank Group: aims to balance social and economic development

WDR 2013 on Jobs defines good jobs in terms of:  **Good jobs for development:**

those that **raise living standards**, have **high levels of productivity**, and **improve social cohesion** through positive social externalities

→ **Virtuous cycle of higher incomes, higher productivity**

   and greater inclusion
How does the more/better/inclusive jobs agenda intersect with informality?

➢ More

When economies grow, more (formal) jobs are created ↔ when more (formal) jobs are created, economies grow

• More people are working → higher incomes → increased demand for goods/services → more jobs (some of which are more productive and formal)

➢ Better

At the firm level, informal firms that can invest and upgrade/expand can increase productivity and access markets:

→ more sales, hire more workers, pay higher wages and/or offer better benefits

At the worker level, self-employed farmers and micro-entrepreneurs who raise their productivity through better market access/input quality/business management/technology:

→ higher earnings, more saving and/or investment

➢ Inclusive

When excluded groups are connected to work:

→ HH living standards rise and poverty falls, contributing to better social outcomes and stronger, more cohesive communities
