I. STRATEGIC CONTEXT

A. Global Context

1. Forests are essential to maintain global carbon balance and ecosystem services. They comprise the largest terrestrial carbon pool and balance the global carbon budget storing nearly 247 gigatons of carbon (45% of terrestrial carbon) in their biomass for decades or longer, releasing it to the atmosphere only when burned or cleared for other land uses. As carbon sinks, forests remove around 27% of the annual global CO2 emissions from the atmosphere, which helps to keep the total atmospheric concentration of CO2 in check and slow down global warming.

2. It is estimated that forest ecosystems in the tropics are the source of sustenance for around 1.5 billion, mostly Indigenous Peoples and Local Communities (IPLCs) as a source of food, fuelwood, hunting, fishing, non-timber products, shifting agriculture and medicines and, as a source of cultural identity. While Indigenous Peoples and Local Communities own, occupy, or use a quarter of the world’s surface area, they safeguard 80% of the world’s remaining biodiversity. Forest-dependent Indigenous Peoples and Local Communities own and manage forest resources and biodiversity in a sustainable manner contributing to the preservation of about one-fourth (415 million ha) of global forest area.

3. Indigenous Peoples (IPs)\(^1\) and Local Communities (LCs)\(^2\) hold a considerable amount of the world’s land. There are approximately 1.5 billion Indigenous Peoples and Local Communities in the world, and their customary lands encompass as high as 65% or more of the world’s land area.\(^3\) Livelihoods of these communities, and particularly of the IPs, their culture, social fabric, spiritual practices, and often identity, are based and depend on these lands and associated natural resources.

4. Notwithstanding a broad spectrum of tenure and rights regimes, many communities see themselves as stewards of forests and have an intricate relationship with the land and its biodiversity. Disturbance of forest ecosystems and their biodiversity results in loss of livelihoods and food sources, forcing communities to migrate, resulting in poverty and cultural dispossession, including loss of Indigenous knowledge and skills. IPLCs are likely to face more significant stress due to close cultural and ancestral ties with the forest ecosystems of which they are a part.

5. Additionally, IPLCs hold vital ancestral and traditional knowledge and expertise on how to adapt, mitigate,

---

\(^1\) Definition of Indigenous Peoples is based on the World Bank’s Environmental and Social Framework and Standards.

\(^2\) Although there is no set definition of “local or traditional communities” and the definition varies in each country. According to the Convention on Biological Diversity (2006), the issue of cultural identity is a multidimensional and complex issue. Self-identification is the most appropriate way to establish who may be indigenous and local and/or traditional communities.

and reduce climate and disaster risks. IPLCs manage some of the wealthiest carbon stocks in the world. According to Rights and Resources Initiative (2018), Indigenous Peoples and Local Community lands store about 17% or 293,061 million metric tons (Mt) of the total carbon stored in the forestlands, making these lands critically important in the global fight to curb climate change.

**B. Sectoral and Institutional Context**

6. Reducing Deforestation and Forest Degradation (REDD) has emerged as a promising approach that can tackle forest-based emissions and contribute to development outcomes. The idea of rewarding countries for avoiding deforestation caught the imagination of the international community and received strong affirmation in the Stern Review in 2006, which concluded that “curbing deforestation is a highly cost-effective way of reducing GHG emissions.” Consequently, efforts to conserve forests and slow down, reduce and reverse forest loss have been a part of the UNFCCC negotiations since 2007 through actions collectively referred to as REDD+.

7. While the initial concept focused only on results-based payments for “avoided deforestation,” the current definition of REDD Plus (or REDD+) by the UNFCCC is more holistic and includes sequestering carbon through forest conservation, sustainable management of forests, and enhancement of forest carbon stocks. It recognizes that climate change mitigation outcomes cannot be achieved without addressing development needs. The approach now includes ‘co-benefits’ or ‘multiple benefits,’ most important of which are biodiversity conservation, improved livelihoods, and safeguards that take into account the rights and cultures of Indigenous Peoples and Local Communities.

8. Wealth of experience is being generated through REDD+ pilot programs on the ground. The Forest Carbon Partnership Facility (FCPF), the Forest Investment Program (FIP), Global Environment Facility (GEF) and the United Nations Collaborative Programme on Reducing Emissions from Deforestation and Forest Degradation in Developing Countries (UN-REDD Programme), in addition to bilateral and NGO-supported programs are implementing REDD projects around the world. Experience from these projects is enhancing the understanding of policy and institutional mechanisms to enable countries to not only reduce deforestation but also measure reports and verify the gains in forest cover and benefit from performance-based payments.

9. The FIP was established in 2009 as one of the four targeted programs under the Climate Investment Fund (CIF) to provide upfront bridge financing to developing countries’ REDD-efforts. The DGM program is currently implemented in twelve countries where FIP resources are deployed to address key drivers of deforestation and forest degradation for transformational change that can be scaled up.

---

10. The design of the Forest Investment Program (FIP) identified the need for active participation of Indigenous Peoples’ and Local Communities (IPLCs) in the program, in line with ongoing international discussions on the role of IPLCs in REDD+. IPLC observers at FIP design discussions stressed the need for dedicated resources to augment their capacity to participate in FIP implementation. The FIP Design Document recognized that “the full and effective, continuous participation of indigenous peoples and local communities in the design and implementation of FIP investment strategies is necessary. This participation will be highly dependent on strengthening the capacity of these groups to play an informed and active role in national REDD processes in general and FIP processes in particular, as well as on recognizing and supporting their tenure rights, forest stewardship roles, and traditional forest management systems,” and mandated the establishment of a unique initiative – a dedicated grant mechanism (DGM) for Indigenous Peoples and Local Communities “to provide grants to Indigenous Peoples and Local Communities in-country or regional pilots to support their participation in the development of FIP investment strategies, programs and projects.”

11. At its 7th meeting in November 2011, the FIP Sub-Committee approved the DGM design overall program proposal as presented by a working group of IPLCs. It endorsed the fundamental principle of this mechanism that IPLCs take the lead in designing the program according to their needs and requested Multilateral Development Banks (MDBs) and the representatives of the IPLCs to develop further the project/program proposals required for approval of FIP funding and operationalization of the grant mechanism. It also endorsed a structure of the original DGM global learning and knowledge exchange project (referred in this document as phase one DGM Global project) and individual projects (referred in this document as DGM Country Projects) in each DGM pilot country, as well as a two-tiered governance structure of IPLC-led global and National Steering Committees.

12. The World Bank implements the first phase of the DGM Program and the Global Learning and Knowledge Exchange project and continues its support through the second phase of the DGM Program as described in this document. The World Bank was requested by IPLCs to continue being the implementing MDB of the Program in all DGM countries.

13. The overall DGM Program document builds on FIP Sub-Committee decisions and the foundational design of the first phase of the DGM Global project while underscoring the complementarity with the Forest Investment Program and the DGM country projects. The first phase of the DGM Global project started its implementation in early 2015 to support the first set of DGM countries (Brazil, Indonesia, The Democratic Republic of Congo, Mexico, Ghana, Peru, and Burkina Faso). The first phase of the DGM Global project will close in June 2020.

14. As these projects will continue to be implemented over the next few years and a new set projects have been or are expected to be approved by June 2020, the proposed phase two DGM Global project is intended to

---

support both the first set of DGM countries and new DGM countries (Cote d’Ivoire, Guatemala, Mozambique, Nepal, and the Republic of Congo).

15. The overall DGM Governance structure was designed and endorsed by IPLCs during the first phase of the DGM Global project. Consequently, the second phase of the DGM Global project builds on established procedures, modalities, and the DGM governance structure. However, during the phase one of the DGM Global project implementation stage, it was acknowledged by both the GEA and the World Bank that project development objective, components, indicators, and targets were originally inadequately designed. Based on multiple discussions with GEA and GSC, the design of phase 2 of the DGM Global project addressed all lessons learned from the first phase, particularly it improved the clarity of the Project Development Objective (PDO), strengthened project components, set clear indicators and respective targets. Moreover, experience from the first phase of the DGM Global project showed that the budget allocation for each component and sub-component were not realistic and were revised during implementation. The phase 2 project has incorporated those budget-related lessons, which were discussed with the GEA and approved by the World Bank. Additionally, as per request by the GSC and respective IPLCs, new activities have been added (i.e. global and regional exchanges, fellow exchanges). Other lessons from the phase 1 project included a call for a reduction of annual and semi-annual reports produced by the GEA, the frequency of meetings to be reduced to those of strategic relevance, as well as to lift restrictions that have been placed for GEA staff travels to improve project efficiency. All these lessons from the first phase are reflected in the design of phase 2 of the DGM Global project and addressed in this document.

16. Additionally, the CIF Evaluation and Learning initiative conducted an independent learning review of the DGM program (including Phase 1 of the DGM Global Project and Country Projects). The learning review was undertaken independently by ITAD Consulting which identified that global, regional and national initiatives led by IPLCs such as the DGM are demonstrating – with impressive results – that the impact of IPLCs’ implementation of climate finance can be felt across many scales, from streamlining land titling efficiently at the national level to strengthen the role of IPLCs in international climate policy. The significant progress reported in the recent DGM Annual Country Report demonstrates ways IPLCs can be involved successfully in national actions. Key factors for their success include:

- **It is governed by IPLC leaders**: DGM is governed by IPLC organizations and supported by an Executing Agency. This structure contributes to transparency and effectiveness when targeting project objectives and priorities.

- **It is implemented by IPLC organizations and communities**: this creates a great sense of ownership and accountability in the project. Project implementers are, therefore, also already familiar with the local context and complexity of land titling processes in each region.

- **It is decentralized**: DGM has demonstrated its efficiency in comparison to more extensive and older funding pledges.
• **It is designed with specific objectives:** the funding has clear objectives, and stakeholders are not only delivering results but also building their capacities to manage multilateral finance. Moreover, IPLC leaders are participants in the design process.

• **Greater recognition of IPLC issues:** it contributes to poverty reduction, livelihood development, climate, and sustainable forest management at the country and global levels and raises awareness of the work IPLCs are carrying out.

• **The augmented capacity of IPLCs:** increasing IPLC capacity to participate in REDD+ processes, manage funds, implement and monitor projects is a critical element of the DGM.

• **IPLC empowerment:** as a result of the negotiation, design, and implementation of the DGM, IPLC organizations play a key role in the design and implementation of policies and programs that impact them directly, represent their constituents, and engage at a global level.

• **Gender-inclusive approach:** female representation in the Global Steering Committee and an increase in participation in project activities/training led by women.

• **Efficiency in project implementation:** IPLC-led and implemented mechanism results in the more efficient implementation of project objectives and land tenure processes.

17. Highlights from DGM Learning Review conducted by ITAD also include the following lessons learned about the DGM:

a. DGM is leading to broader and potentially more transformational effects than earlier predicted.

b. Substantive outcomes: better governance, higher recognition, increased efficiency, improved land rights, better natural resource management, and income generation.

c. Enabling outcomes: more ownership and trust, transparent governance.

d. The outcomes for other stakeholders include an improved relationship with IPLCs, and IPLCs being more accepting of REDD+ and the FIP.

18. The review identified two pathways:

- The cumulative contribution of subprojects.
- Empowerment to raise issues from national to global levels.

19. ITAD’s report highlights that the DGM has reached a crucial juncture, where new funding is needed. Country DGMs have demonstrated a keen interest in sourcing their funding, but any breaks in funding also represent a challenge for maintaining the motivation and trust that are critical for the DGM to continue to operate successfully.

**C. Higher Level Objectives to which the Project Contributes**

20. The project will contribute to a greater voice and role for IPLCs, which would make REDD+ more effective in achieving its goals. That conservation *and* livelihood objectives can be achieved in forests under Indigenous
or community management has been known and promoted for decades, and reaffirmed with more analyses.\textsuperscript{6} While community participation at the project level is relatively prevalent in forestry programs, it needs to be strengthened significantly at strategic and policy levels.

21. This project will also support the facilitation of a better understanding and appreciation of Indigenous and traditional knowledge of biodiversity, forest management, and agroforestry, which have an essential role in the development of robust climate resilience strategies. Additionally, the project will continue strengthening IPLCs capacity to play an informed and active role in national REDD+, FIP, PROGREEN, FCPF, GCF and other relevant programs, as well as on recognizing and supporting their tenure rights, forest stewardship roles, and traditional forest management systems.

22. The project aligns with the WB’s twin goals of shared prosperity and extreme poverty reduction. The proposed program is entirely in line with the World Bank Group’s (WBG) twin goals of ending extreme poverty and boosting shared prosperity for IPLCs. Some 300 million to 350 million people, about half of whom are indigenous, live within or close to dense forests and depend almost entirely on forests for subsistence.\textsuperscript{7} The World Bank report on Indigenous Peoples, Poverty, and Development (2014) estimated that Indigenous poverty headcount (the percent of the population living below the poverty line) is much larger than for the non-indigenous population, and the poverty gap (the distance from the poverty line) is far larger than the national average. This means that not only are there more Indigenous Peoples than non-indigenous classified as poor but that their poverty is also more severe. This manifests in various ways, including insecure land and property rights, discrimination, heightened vulnerability to risk and climate change, and a wide range of health, education, and other related socio-economic disparities. Additionally, forests are an essential aspect of rural livelihoods. The recently completed Poverty and Environment Network (PEN)\textsuperscript{8} survey documented that rural households living near forested areas derive 22 percent of their income from forest sources. Forest resources enable people to rise out of extreme poverty and reduce vulnerability, particularly for IPLCs.

23. The phase two DGM Global project supports the World Bank’s Forest Action Plan (FAP).\textsuperscript{9} The project supports the primary interventions of the FAP’s Focus Area 1 on Sustainable Forestry through learning and knowledge exchanges of good practices for “protecting and optimizing the use of forest, both natural and planted, to sustain livelihoods, create jobs and economic opportunities in rural areas while preserving ecosystem services delivered by forests,” as well as the cross-cutting themes of rights, participation, institutions and governance, climate change, and resilience. The project’s strategic involvement in supporting IPLCs will

\textsuperscript{6} Nelson A, Chomitz KM. (2011). Effectiveness of Strict vs. Multiple Use Protected Areas in Reducing Tropical Forest Fires: A Global Analysis Using Matching Methods. PLoS ONE 6(8): e22722; and

\textsuperscript{7} Chao.(2012)

\textsuperscript{8} The PEN survey covers about 8,000 households in 24 countries across Sub-Saharan Africa, South and East Asia, and Latin America, and is representative of smallholder-dominated communities living close to forests (with access to forest resources).

strengthen the foundations for positive forest outcomes while improving living conditions and diversifying livelihoods among IPLCs.

24. The project’s approach also embodies many of the United Nations' (UN) Sustainable Development Goals (SDGs) and will strongly contribute to the 2030 Agenda for Sustainable Development Goal of Leaving No One Behind. Overall, the project interventions will contribute to poverty reduction (SDG-1: No Poverty) and inclusive and sustainable economic growth (SDG-8: Decent Work and Economic Growth). The project will promote sustainable forest management and reverse land degradation (SDG-15: Life on Land), and promote climate change action, awareness-raising, and human capacity in climate change mitigation and adaptation, which will increase the resilience of the rural population (SDG-13: Climate Action). It will also contribute to capacity-building of local communities, enhancing multi-stakeholder partnerships to mobilize and share knowledge, expertise, and technology in the targeted forest areas while at the same time encouraging and promoting effective partnerships with public, private, and civil society organizations (SDG-17: Partnerships for the Goals).

25. The project is in full alignment with the World Bank PROGREEN program, the Global Partnership for Sustainable and Resilient Landscapes, which aims to support countries’ efforts to improve livelihoods while tackling declining biodiversity, loss of forests, deteriorating land fertility and increasing risks such as uncontrolled forest fires, which are exacerbated by a changing climate. Particularly with Pillar 1 on the increase in the area of land under integrated management to improve livelihoods, support economic development, and maintain and restore ecosystem services. As well as the Cross-cutting themes to all three pillars on engaging communities and vulnerable groups, addressing climate change mitigation and resilience needs, and leveraging and mobilizing finance for development.

26. The project is also in alignment with the adoption of international instruments and mechanisms, such as the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP) in 2007, the American Declaration on the Rights of Indigenous Peoples in 2016, 23 ratifications of the Indigenous and Tribal Peoples Convention from 1991, the establishment of the United Nations Permanent Forum on Indigenous Issues (UNPFII), the Expert Mechanism on the Rights of Indigenous Peoples (EMRIP), and the UN Special Rapporteur on the Rights of Indigenous Peoples (UNSR).

II. PROJECT DEVELOPMENT OBJECTIVES

A. PDO

The Project Development Objective is to strengthen networks and partnerships for DGM Indigenous Peoples and Local Communities (IPLCs) at regional and global levels.
B. Project Beneficiaries

27. The direct beneficiaries of the Phase 2 DGM Global project are Indigenous Peoples and Local Communities (IPLCs) who engage with 12 Country Projects (Brazil, Burkina Faso, Cote d’Ivoire, DRC, Ghana, Guatemala, Indonesia, Mexico, Mozambique, Nepal, Peru and Republic of Congo) funded by the DGM as well as distinguished IPLC representatives from other countries supporting forest-dependent Indigenous Peoples and Local Communities.

28. It is important to note that IPLCs are more than solely “beneficiaries” of the program. At the country level, IPLCs design and implement their respective DGM Country Projects, and at the global level, IPLCs chair and overlook the governance of the DGM program as a whole. The approach of the Phase 2 DGM Global project is to partner with the intended beneficiaries and key stakeholders throughout the design, and implementation, which is a key feature that addresses challenges usually associated with poor participation and consultation in-country projects. The strong role of IPLCs in Phase 2 of the DGM Global at global and country levels provides an unprecedented opportunity to ensure that the DGM meets the needs of the key stakeholders and minimizes the risk associated with Country Project design and implementation. The DGM recognizes that there are essential socio-cultural and economic differences between IPs and LCs, which must be respected during implementation while ensuring at the country level that the program is inclusive and reaches out to vulnerable communities – both Indigenous and non-Indigenous.

29. The reference to IPs in the Program is based on the World Bank’s Environmental and Social Standard ESS7. In ESS7, the term “Indigenous Peoples/Sub-Saharan African Historically Underserved Traditional Local Communities” (or as they may be referred to in the national context using an alternative terminology) is used in a generic sense to refer exclusively to a distinct social and cultural group possessing the following characteristics in varying degrees:

(a) Self-identification as members of a distinct indigenous social and cultural group and recognition of this identity by others; and
(b) Collective attachment to geographically distinct habitats, ancestral territories, or areas of seasonal use or occupation, as well as to the natural resources in these areas; and
(c) Customary cultural, economic, social, or political institutions that are distinct or separate from those of the mainstream society or culture; and
(d) A distinct language or dialect, often different from the official language or languages of the country or region in which they reside.

30. Local communities generally represent the dominant culture and usually share their social traits, values, norms, and languages. They often lack political voice and are marginalized, living in remote locations with limited access to economic opportunity and development. For these reasons, the DGM Global project will organize and facilitate knowledge exchanges, learning, and provide capacity building activities for local communities as well as Indigenous Peoples that are part of the DGM program.

C. PDO-Level Results Indicators
III. PROJECT DESCRIPTION

A. Project Components

31. **Component 1: Global and Regional Learning (US$569,000).** The focus of this component is to organize and facilitate knowledge exchange, learning, and capacity building on forests and climate change issues at regional and global levels. A detailed description of this component could be found in Appendix A. Activities under this component have a global or regional scope and include:

32. **Sub-Component 1.1. DGM Learning Exchanges:** organizing global capacity building and learning exchanges to learn from the successful implementation of Community-led DGM Projects and other relevant experiences. Global learning exchanges are organized to facilitate participants’ learning from technical experts and successful Indigenous Peoples’ and local community-led DGM country projects, for example, on benefit-sharing, land tenure, sustainable agroforestry, community enterprises, participation in international climate policy, climate-smart agriculture and other issues identified by beneficiaries and the Global Steering Committee (GSC). Exchanges seek to strengthen capacities of regional or global IPLC organizations and networks and facilitate their participation in climate change negotiations, including training on international negotiations and relevant international policy dialogues and processes. Activities also include the development of culturally appropriate knowledge resources for use by IPLCs globally that are distributed during exchanges.

33. **Sub-Component 1.2. DGM Fellow Exchanges:** organizing a series of bilateral short-term targeted exchanges to DGM Country Projects to share IPLC expertise and experiences between DGM countries and across regions. Fellow exchanges will provide DGM beneficiaries with the opportunity to participate in two-week-long learning exchanges to other DGM countries, with the goal of shared learning and knowledge exchange and the local adaptation of best practices in DGM project implementation. This provides a horizontal learning experience where IPLCs learn from one another.

34. **Component 2: Governance and Partnerships (US$792,000).** This component helps enable the GSC to fulfill its role within the DGM in addition to strengthening IPLC networks and organizations in

PDO Indicator 1: IPLC and DGM stakeholders engaged in DGM global and regional knowledge exchange (number); (knowledge exchange)

PDO Indicator 2: DGM Global fellows that achieved their learning objectives (percent) (learning)

PDO Indicator 3: Capacity-building activities under DGM (number) (disaggregated by type) (capacity building)

PDO Indicator 4: Joint activities and/or alliances under IPLC leadership at regional and/or global level that emerged through the global platform (number) (partnerships and networks)

PDO Indicator 5: GSC providing fiduciary and general oversight to the DGM program (Yes/No)
global forums. Given the wide range of the GSC’s functions, a significant portion of DGM Global activities is devoted to providing the necessary resources and support to the GSC as outlined below. A detailed description of this component could be found in Appendix A.

35. **Sub-Component 2.1. Secretariat of the Global Steering Committee:** providing the necessary secretariat services to the GSC meetings, GSC Subcommittees, and Co-chairs. Facilitating GSC meetings and enabling the GSC to fulfill its role as the overall governing body of the DGM to provide fiduciary and general oversight to the program. DGM Global activities include the logistical coordination and support to annual GSC meetings, the preparation of the communications plan, and relevant documents such as DGM Global budget, Grievance Redress Mechanism (GRM), and workplan as well as the facilitation of the GSC election process.

36. **Sub-Component 2.2. Managing IPLC partnerships and networks:** facilitating the engagements of GSC members with other IPLC partners at relevant international policy dialogues, forums, and processes including but not limited to (i) UNFCCC, (ii) UNPFII, (iii) International Indigenous Peoples Forum on Climate Change (IIPFCC), (iv) FCPF. The GEA will provide necessary logistical and technical support on the GSC’s participation in these various events, including the provision of technical resources and travel coordination.

37. **Component 3: Monitoring, Reporting, GRM, Communications, and Project Management (US$939,000).** This component covers the costs for implementation of DGM Global communications, robust monitoring, and reporting (M&R), and an efficient project-related Grievance and Redress Mechanism (GRM). It will additionally cover the incremental operational, technical, and managerial costs of the GEA team to carry out its tasks and overall responsibilities required to support the management, monitoring, reporting, and communications of project activities. The project will finance staff, consultants, goods, services, and operational costs for the GEA. A detailed description of this component could be found in Appendix A. Expected outputs include:

38. **Sub-Component 3.1. Monitoring and Reporting of the DGM Global Project:** conduct monitoring and reporting on the results and overall performance of the global project, and compile and report the results of Country Projects. The activities under this sub-component are not a substitute for the monitoring and reporting that DGM projects in the countries will carry out as per Bank requirements for all investment projects. GEA will coordinate actively with National Executing Agencies (NEAs) in DGM countries to monitor and document the overall implementation progress of the DGM. The NEAs will provide information to the GEA through these standard formats for a DGM-wide compilation of progress reports. The GEA will provide advice and coordination to NEAs to ensure that information from national-level monitoring efforts flows effectively to reporting on progress toward achieving global indicators. The GEA will submit a DGM Annual report, and a DGM semi-annual progress report.

39. **Sub-Component 3.2. Grievance and Redress Mechanism of the DGM Global Project:** maintain and facilitate the functioning of a DGM Global grievance redress mechanism for matters that are not resolved at the country level and are escalated to the GSC. GEA works with the GRM subcommittee
to ensure that the GRM is active and responsive to complaints and grievances that may advance to the GSC for resolution through EthicsPoint, a third-party system for grievance reporting.

40. **Sub-Component 3.3. Communication and knowledge management of the DGM Global Project:** liaise, collaborate, and coordinate actively with the NEAs and Global Communications Team (GCT) to conduct communications and outreach activities, including the dissemination of culturally appropriate and inclusive information across DGM communication channels. Ensure the sufficient flow of information and broad availability and accessibility of the DGM results and impacts, both nationally and globally. This includes the procurement of goods and services such as translation, interpretation, and graphic design for the preparation and delivery of reports and knowledge products.

41. **Sub-Component 3.4. Management of the DGM Global Executing Agency:** supporting the project management, strategic planning, and logistical coordination required to ensure the successful implementation of the DGM Global project.

42. **Participatory and inclusive stakeholder approach.** DGM Global is implemented, under the leadership and guidance of a GSC, by the World Bank in partnership with a GEA. In 2011, FIP allocated funding to eight DGM countries. In 2015, after the FIP Subcommittee approved the proposal for allocating resources to six new FIP pilot countries and the national and global projects of the DGM, the GSC endorsed the decision to allocate new FIP funding for the Phase two of the DGM Global during the DGM GSC meeting in Bali, Indonesia in July 2015.

43. Up to now, with the approval and endorsement of the WB and GSC, the Global Project has accommodated the inclusion, support, and participation of the additional six countries with the current DGM Global project. This includes learning exchanges, strategic events, global governance of the DGM, responding to requests for support in the formation of their NSCs, the selection of their NEAs, and the design of standard monitoring, reporting, and communications components.

44. The GSC has led the design and scope of this project since its early beginnings. The recommendations are reflected in documents such as (i) GSC Meeting Decisions in 2017, 2018, and 2019, (ii) GSC and GEA Mid-term review report to WB in 2017, (iii) DGM updates at FIP SC meetings, (iv) GSC Budget Subcommittee and Sustainability working group meetings, (v) WB Annual Project Missions, and (vi) Global Project Semiannual Reports.

45. **Transparent implementation arrangements and procedures.** The project will ensure a transparent and simplified implementation arrangement through open data access on the DGM website. The GEA will conduct periodic progress reports on Global and Country Project performance on a biannual basis, including procurement and financial reporting. The project will rely on streamlined and flexible procedures for M&R, communication, and outreach strategies.
B. Project Cost and Financing

The proposed operation is an Investment Project Financing, supported by a grant from the Strategic Climate Fund in the amount of US$2.3 million and structured as detailed below.

IV. IMPLEMENTATION

A. Institutional and Implementation Arrangements

47. The DGM program has a global/regional and national approach. This project will support the global and regional activities of the DGM program. The national approach is supported by its national DGM. The below section outlines the governance structure and relation between global and country projects:

a. **Global Project (current project)** for exchange of knowledge and building of networks and partnerships among IPLC organizations in DGM countries and elsewhere; and

b. **Country projects** in most of the FIP countries (Brazil, Burkina Faso, Côte d’Ivoire, Democratic Republic of Congo, Ghana, Indonesia, Mexico, Mozambique, Republic of Congo, Guatemala, Nepal, and Peru) to support on-the-ground activities and capacity-building.

48. The **Global Steering Committee** (GSC) will oversee the Global Learning and Knowledge Exchange Project, as well as provide intellectual and policy leadership to the DGM and monitor overall implementation.

49. **Global Steering Committee** (GSC) provides intellectual and policy leadership to the DGM and monitors the overall implementation of the DGM. It will report to the FIP SC on the progress of the program. The GSC also has an essential role in external interactions with contributor countries and other partners to advocate for IPLCs in international forums on climate change and REDD+. Representatives of the GSC will also assist in disseminating information and raising awareness about the DGM in their countries and in identifying opportunities for additional resources and expansion of the program. The GSC will ensure that the program lessons are widely disseminated. The GSC will mediate complaint
and grievance issues if requested by NSC. The GSC approves the annual work program to be implemented by the Global Executing Agency (GEA) for the Global Project. The GSC also has a vital role in external interactions to advocate for IPLCs in international forums on climate change and REDD+.

50. **Executing Agencies in-country projects.** In each DGM pilot country, a **National Executing Agency** (NEA) will be the secretariat for the NSC. The NEA will maintain documentation of the DGM country projects, follow the communications strategy in coordination with the GEA, manage grievance and complaints redress processes, respond promptly to queries, and coordinate with and send information as requested to the GEA.

51. **Global Executing Agency** (GEA) will provide secretariat functions for the GSC. The GEA will carry out the agreed activities of the Global Project and will have responsibility for the overall communications and outreach activities of the DGM. It will coordinate actively with the NEAs in the DGM countries to develop and apply a monitoring framework and report on the implementation progress of the DGM, organize knowledge and learning exchanges, and lead DGM global communications. The GEA will liaise with global partners working on similar issues to enhance synergies and learning opportunities through the DGM. Such partners could be the UN-REDD, FCPF, IFAD, GEF, international foundations, and others.

52. GEA will also facilitate a grievance redress and complaints mechanism on behalf of the GSC. The GEA is selected through a competitive process administered by the World Bank. For the implementation of the second phase of the Global Project, the GEA will seek approval of its work plan by the World Bank and will report to the World Bank on the program, including fiduciary aspects. The GEA will implement activities of the Global Project in compliance with the World Bank’s operational policies, including the ESF.

**B. Results Monitoring and Evaluation**

53. Monitoring, Learning, Evaluation, and Reporting (M, L, E&R) are part of DGM’s core activities both at the Global Project and Country Project levels. They are tools for bringing together diverse stakeholders toward the common development objective of the DGM Program while addressing significant risks during program implementation and ensuring both upward and downward accountability.

54. The GEA has vast experience in collecting data, monitoring, and reporting, including coordinating the compilation and aggregation of DGM country data. During Global Exchanges, the GEA will compile country data from participating NEAs for reporting purposes.

55. During the Phase 1 of the DGM Global project, the Global Steering Committee approved the redesign of the Global Project results framework during the annual GSC meeting in April 2018. Between April and July 2018, the GEA redesigned the project’s results framework, which streamlined the collection and reporting of data and prompted the development of an annual perception survey administered online through Survey Monkey. Subsequently, the Global Steering Committee approved the updated targets during the GSC meeting in May 2019. All these changes are reflected and incorporated in the proposed DGM Global Phase 2 project.

56. The GEA will provide the support needed to DGM Country Projects to ensure vital learning and transparency in the project, as well as to ensure dissemination of project results to the Global Steering Committee. The GEA will monitor and evaluate the progress of the Global Project, and report on both Global Project and Country Project activities on a semiannual basis through the development of a Semiannual Progress report. This report will be submitted to the World Bank and the Global Steering Committee 60 days after the end of the reporting semesters— ending June 30 and December 31. An annual report on the DGM will be submitted to the World Bank 90 days after the end of each Fiscal Year.

57. The information in the semiannual progress related to the country projects will be compiled from information provided by the NEAs. These reports will include descriptions of DGM Country activities, progress, lessons and results, details of the portfolio in the countries and the activities of the Global Project, status of implementation, funding allocations for the previous period, and other pertinent
information.

58. The project will work closely with NEAs to report on project results. The GEA will actively coordinate with the NEA to develop a reporting framework on the project’s implementation in order to monitor and document overall implementation progress; it will be consolidated with other national DGM projects and presented in a DGM-wide compilation of progress reports. The Global DGM project will also provide advice and coordination with other NEAs in DGM countries to ensure that information from national-level monitoring efforts on progress toward achieving global indicators flows effectively to reporting mechanisms.

59. Among others, NEAs of each DGM country and the GEA play pivotal roles in collecting, updating, and aggregating data. In order for NEAs and the GEA to fulfill such critical roles with sufficient capacity and resources, WB country teams in each DGM country and WB Global DGM Team will provide them with technical support and review the data for quality assurance.

60. The progress and success of the project will be measured against the results (performance) indicators, as shown in the results framework attached below (Appendix E). M&E activities will help collect, analyze, and present data on progress towards achieving the project’s objectives.

61. The project Results Framework includes a set of indicators, their respective units of measurement, baselines, annual targets, and data collection methodologies. The GEA is responsible for data collection and reporting. Data will be collected semiannually to monitor progress towards the achievement of results. An annual implementation review mission will be carried out by the WB to help assess the progress that has been made with respect to the main Project Development Objective (PDO) indicators and to verify that individual components have attained their goals.

62. In order to measure progress toward achieving the PDO, the project has four PDO indicators (see the project Results Framework in Appendix E). These indicators include various aspects designed to enhance knowledge exchange across countries and regions and strengthen the capacity and alliances of IPLCs. PDO Indicator 1 is focused on the number of global and regional learning exchange participants. PDO Indicator 2 monitors the percent satisfaction of Global Steering Committee members. PDO Indicator 3 measures DGM Global’s communications reach by monitoring the global project website’s (www.dgmglobal.org) monthly visitors. Additionally, a set of intermediate indicators for each project component has been developed to track results critical to measuring project progress during implementation.
C. Sustainability

63. The available resource envelope for the DGM Program is limited given the scale of the issues and the geographies it is targeting. Yet, the DGM Program’s potential is recognized by the main stakeholders and the current design with a robust governance and fund management system allows it to grow and sustain even after the current round of funding as it is amenable to absorbing funding from other sources. Given the intensive efforts and resources invested in establishing the governance structures, it would be a missed opportunity for the mechanism to be a short-lived phenomenon. Substantive efforts have already been made by the Global Project to serve as a platform to reach out to new partners and indicate their interest in outreach efforts. For example, links with the World Bank PROGREEN program and the GEF together with CI are being explored as possible areas for future support. Additionally, the current project will carry out external outreach on the program and fundraising opportunities to organizations such as UNPFII, UNREDD, GEF, IFAD, FCPF, global and regional IPLC organizations, and other organizations and donors working on, influencing or funding REDD+ and other climate mitigation and adaptation mechanisms. Importantly, this project will explore ways to sustain and scale country-level DGMs through technical and necessary logistical support to ensure that IPLCs can lead fundraising efforts on their own and continue the DGM after the funding ends and scale up their activities.

V. KEY RISKS

A. Overall Risk Rating and Explanation of Key Risks

64. The overall risk of the project is considered Moderate. An explanation of the most relevant risk and proposed mitigation measures are detailed below.

65. Fiduciary – Moderate: This project requires coordination, travel, and services provided to the GSC and learning events for achieving the grant objectives. Conservation International (CI) has identified experienced staff to carry out such activities. Some of the same identified staff will also be working on other initiatives of the CI grant implementing agency. Similarly, the CI staff will also be traveling for implementing and attending learning events, workshops, and trainings. Therefore, there is a risk for accurately recording and documenting the portion that is related to the World Bank grant activities, mainly when activities are funded from the estimated budget of the project. The mitigation measures that are recommended and in place to mitigate such risks are i) timesheets for the work of the grant, and such records are made available to the World Bank for post review; ii) travel of project staff will be included in annual workplan for WB no-objection in preparation of GSC meeting for maintaining transparency, economy & efficiency of the project; iii) periodic financial reports will be supported with a brief progress report for activities that have taken place during the reporting period; and, iv) preparation of annual budget for activities that are planned for each fiscal year of the active project period will be concurred and preapproved by the World Bank prior to any other clearance the project requires. Overall the project risk related to the implementation was high but with mitigation measures put in place will reduce the risk to
**Moderate.** A minimum of one fiduciary supervision visits will be undertaken each fiscal year of the project period, and the risk rating will be revisited and reassessed.

### VI. APPRAISAL SUMMARY

**Note to Task Teams:** Please provide a summary description of the main economic benefits and costs of the project, and a summary of the key FM, procurement and safeguard issues.

#### A. Legal Operational Policies

<table>
<thead>
<tr>
<th>Triggered?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Projects on International Waterways OP 7.50</td>
</tr>
<tr>
<td>Projects in Disputed Areas OP 7.60</td>
</tr>
</tbody>
</table>

#### B. Environmental and Social

68. **Environmental and Social Risk Classification (ESRC) for Phase 2 of the DGM Global project is low.** Environmental Risk was rated low as well as social risk. The project’s specific activities are unlikely to generate significant environmental and social risks and impacts as activities are primarily aimed at providing a space and structure for better coordination, knowledge sharing, and overall collaboration between IPLCs in and outside the program. Moreover, the leadership role of IPLCs in the governing body of the program ensures that the stakeholders steer the program which will lead to positive outcomes on the social side.

69. An environmental and social (E&S) screening did not identify any potential risks and/or impacts based on the initial information collected from (i) scope of activities described in the AIS/concept note, (ii) previous risks identified in the original DGM project - FIP Grant Mechanism for Indigenous Peoples & Local Communities (P128748), and (iii) experience of the GEA complying and with environmental and social guidelines and policies.

70. **Conservation International (CI) was competitively selected as the implementing agency.** The DGM Program administrative organization and structure revolve around two levels - the Global and the Country-based. At the Global level, there is the FIP-Committee, Global Steering Committee (GSC), and Global Executing Agency (GEA). The GEA is Conservation International (CI), which was selected through a competitive process administered by World Bank and will implement activities of the Phase 2 of the DGM Global project in compliance with the World Bank’s ESF. The GEA has previous good experience working with World Bank safeguards policies. Specific capacity building on ESF will be further evaluated by the World Bank and, if needed, provided to the GEA before the appraisal.

71. **A Programmatic Environmental and Social Management Framework (ESMF) was designed at the DGM Program level to be used as the operating safeguards umbrella for each DGM country project to provide overarching principles and guidance in line with World Bank’s safeguard policies.** Since the ESMF is
focused on the country-level projects that are likely to generate negative environmental and social impacts – which is not the case for the activities being financed under this Trust Fund - this project will not require an update of the program ESMF. The Bank will nevertheless provide support to the GEA to comply with the commitments based on the relevant Environmental and Social Standards of the WB Environmental and Social Framework (ESF).

72. **CI will prepare instruments such as a Labor Management Procedures and Stakeholder Engagement Plan, including a protocol to engage IPLCs.** The mentioned protocol will detail selecting criteria for IPLC to participate in the supported workshops and guidelines to ensure that these workshops are organized in an inclusive and culturally appropriate manner. The Labor-Management Procedures (LMP) will set out the terms and conditions of employment, principles regarding non-discrimination and equality of opportunity, guidance on workers’ organizations, policies on child and forced labor, measures for occupational health and safety; and, the establishment of a grievance mechanism for labor disputes. The LMP will include measures for addressing GBV/SEA risks, such as a Code of Conduct for CI staff, contractors, and for recipients of the fellowships supported under the project. This Code of Conduct will be included in the agreements and documentation part of the fellowship. The Stakeholder Engagement Plan will also include detailed communication strategies to reach out and engage with IPLCs to ensure inclusive participation in the planned learning exchanges, fellowships, and other plan activities. The project environmental and social instruments will be consulted through the Global Steering Committee, which is the representative body at the global level of country-level DGM participants.

**C. Procurement**

73. The Project will be executed in accordance with the World Bank’s Procurement Regulations for Borrowers under Investment Policy Financing (July 2016, revised August 2018) (“Procurement Regulations”), and the provisions stipulated in the approved Procurement Plan for the first year of the Phase 2 program, and the provisions specified in the Legal Agreement.

74. Procurement activities will be carried out by Conservation International (CI) through its DGM Global Executing Agency located in Washington, DC. This agency already implemented the Phase 1 for the DGM Program and Global Learning and Knowledge Exchange Project (P128748) from December 2018 to December 2020. The project implementing agency will be responsible for all procurement and contracting related queries and processing, including management and compliance with fiduciary requirements. DGM Global Executing Agency is staffed with a procurement specialist and has managed several projects financed by the World Bank for more than ten years. Nevertheless, the DGM Global Executing Agency has limited experience with the Bank’s procurement regulations. As this project will be composed of non-complex consulting services and small goods contracts, the procurement risk is considered moderate.

75. As per the requirement of the Bank’s Procurement Regulations, a Project Procurement Strategy Development (PPSD) has been developed by DGM Global Executing Agency with support from the Bank’s team. DGM Global Executing Agency has also prepared an acceptable procurement plan for the first year of the project.
D. Financial Management

76. A financial management capacity assessment of Conservation International (CI) has been conducted in conformity with the Financial Management Practice Manual for WB-Financed Investment Operations that became effective on December 11, 2014. The objective of the assessment was to reconfirm Conservation International, has acceptable financial management arrangements which will ensure that: (i) the funds are used only for the intended purposes applying efficiency and economy; (ii) accurate and timely periodic financial reports are prepared, and (iii) assets are safeguarded.

77. **FM capacity assessment** conducted in August 2019 revealed that the International NGO had made acceptable FM arrangements including having professional staffing and tools in place to manage the additional financing of the Dedicated Grant Mechanism operation. The FM team is headed by a qualified and experienced Finance Director and assisted by a Sr. Finance Manager and controlled by a Senior Director Grants for reviews and clearance/submission of IFR’s. The FM team needs a refresher clinic on WB FM procedures and requirements as several changes have taken place since the launch of the DGM program by the World Bank. The Implementing Agency (IA) is currently managing the phase one of the DGM Global program and has relative knowledge in implementing the grant and has acceptable FM, including the manual and accounting software Business World (formerly known as Agresso), in place. The financial statements of donor-financed projects are regularly audited by reputable auditing firms that are acceptable to the WB. The auditors expressed a clean opinion (unqualified) in 2016, 2017, and 2018 annual accounts of projects implemented by the IA.

78. **Financial Management arrangement** for the project that satisfies the Bank’s minimum requirements under the Bank Policy and Investment Project Financing (IPF) Directives. Based on the observations of the assessment, the following actions are required to ensure effective FM systems: (i) Prepare the detailed budgets in line with grant agreed activities; (ii) Open a Designated Dollar Account in an eligible commercial bank in USA that is capable of receiving funds from the WB; (iii) Configuration/customization of the accounting software Business World to allow the recording of project transactions and preparation of financial reports; (iv) Draft a short note as an annex to the existing entities FM Manual to reflect the Bank’s FM procedures and requirements and (v) Prepare annual budget for each fiscal year of implementation. These actions are to be completed in a timely manner to help implement the project: Actions (i) to (iv) are dated covenants and should be implemented not later than two months after the project goes into effect.

79. **Reporting:** (i) an annual work program and budget (AWPB) to be submitted not later than [TBD] of the year preceding the year when the work plan should be implemented; (ii) a biannual unaudited interim financial report (IFR) within 60 days following the end of each six month period along with a substantive brief progress report; and (iii) Project audited annual financial statements and management letter not later than six months following the end of each fiscal year.

80. **Disbursements.** Upon TF (Grant) effectiveness, the project will request a six-month forecast that is required for the forecasted period. The project will finance 100 percent of eligible expenditures inclusive of taxes. A Segregated Designated Account (DA) in Dollars will be opened in a commercial bank [Name/Address] under terms and conditions acceptable to the WB. The ceiling of the Designated Account (DA) will be stated in the Disbursement and Financial Information Letter (DFIL) and will represent four to six months of forecasted...
project expenditures expected to be paid from the DA during each project period and based on the AWPB of the project. An initial advance up to the ceiling of the DA will be made, and subsequent disbursements will be made against submission of the unaudited interim financial report (IFR) on the use of the initial/previous advance. Other methods of disbursing the funds, such as reimbursement, will also be available to the project. The project authorized signatory will sign and submit Withdrawal Applications electronically using the eSignatures module accessible from the WB Client Connection website. Misappropriated activities could result in the suspension of financing grant activities.

81. **Supervision.** Based on the current risk assessment, which is moderate, at least one full FM supervision mission is planned over the first year of the project implementation.

82. **Audit Compliance.** CI, the project implementing agency will fully comply with the WB disclosure policy of audit reports and place the information provided on the official website within two months of the report being accepted as final by the team and by the Bank (for additional information refer to Appendix D).

E. Economic Analysis

83. By design, this project is technical assistance to support the knowledge management system and provide capacity building to the beneficiaries. While it is possible to some extent to assess cost-benefits for the country based DGM projects, there are many limitations related to data availability and measurement that prevent the application of the regular cost-benefits assessment in the context of the Global Project.

84. One of the commonly applied approaches to assess the efficiency of these projects is the cost-per-unit comparison method when the cost of the project or its elements is compared to the projects with similar outcomes. This project is designed in a similar way as many other projects of this kind – umbrella or chapeau knowledge platform, intended to provide capacity building, technical assistance to the set of DGM country projects, and facilitate or manage knowledge exchange among beneficiaries. This analysis demonstrated that composition and the overall cost of the Phase 1 of the DGM Global project and Phase 2 of the DGM Global project are compatible with other projects of this kind (refer to Appendix C).

85. Direct and indirect benefits of this project are difficult to measure in economic terms. However, the anticipated impact of the knowledge shared and received by the beneficiaries is immense. A limited list of the DGM outcomes includes broader and potentially more transformational effects/impacts than earlier predicted; substantive outcomes includes better governance, higher recognition, increased efficiency, improved land rights, better natural resource management, and income generation; enabling outcomes includes more ownership and trust, and transparent governance. The outcomes for other stakeholders include an improved relationship with IPLCs, and IPLCs being more accepting of REDD+ and the FIP.

86. While it is not possible to assess the direct benefits associated with this project, some assumptions can be made based on the relevant studies. For example, assessment of the benefits derived as a result of the knowledge acquired on improved forest management, secured tenure, non-timber forest product (NTFP) value chain, etc. There are various impacts that could be assumed as a result of the knowledge exchange process, one of them is an indirect impact as a result of the gained knowledge on sustaining secure community forest tenure.
87. A recent World Resources Institute 2015 benefit-costs analyses\textsuperscript{10} of Brazil’s Indigenous Territories and the community concessions in Guatemala’s Maya Biosphere Reserve suggest that securing community forest tenure is a low-cost, high-benefit investment that benefits communities, countries, and global society. The results of the analyses propose that investing in strong community forest tenure security can be a cost-effective measure for climate-change mitigation when compared with other mitigation measures.

88. Public financing is justified for this project because it will contribute to the social and economic empowerment of IPLCs, enhancing their rights to land and addressing tenure issues, participatory land governance, and, thus, the sustainability of land use. In addition, this project serves as an umbrella for a large number of DGM country projects, which was established to coordinate their implementation and provide learning and knowledge exchange to beneficiaries.

VII. World Bank Grievance Redress

89. Communities and individuals who believe that they are adversely affected by a World Bank (WB) supported project may submit complaints to existing project-level grievance redress mechanisms or the WB’s Grievance Redress Service (GRS). The GRS ensures that complaints received are promptly reviewed in order to address project-related concerns. Project affected communities and individuals may submit their complaint to the WB’s independent Inspection Panel, which determines whether harm occurred or could occur as a result of WB non-compliance with its policies and procedures. Complaints may be submitted at any time after concerns have been brought directly to the World Bank’s attention, and Bank Management has been given an opportunity to respond. For information on how to submit complaints to the World Bank’s corporate Grievance Redress Service (GRS), please visit http://www.worldbank.org/en/projects-operations/products-and-services/grievance-redress-service. For information on how to submit complaints to the World Bank Inspection Panel, please visit www.inspectionpanel.org.

VII. RESULTS FRAMEWORK AND MONITORING

Note to Task Teams: The following sections are system generated and can only be edited online in the Portal.

Results Framework
COUNTRY: World
Phase 2 for DGM Program and Global Learning and Knowledge Exchange Project

Project Development Objectives

The Project Development Objective is to strengthen networks and partnerships for DGM Indigenous Peoples and Local Communities (IPLCs) at regional and global levels.

Project Development Objective Indicators

<table>

<td>GEA</td>
</tr>
</tbody>
</table>

Description: This indicator captures the total number of IPLCs that participate in DGM Global knowledge exchanges (without double counting).

This is measured through a review of knowledge exchange participant attendance sheets and a list of fellows. Exchange participants are nominated and selected by respective country NSC members.
### Indicator Name

**Name:** DGM global fellow that achieved their learning objectives (percent)

**Corporate**

**Unit of Measure**

**Baseline**

0.00

**End Target**

85.00

**Frequency**

Annual

**Data Source / Methodology**

Review of deliverables and fellowship monitoring report

**Responsibility for Data Collection**

GEA

### Description

This indicator will be assessed “if the fellow completed and achieved their objectives,” based on the following criteria; (i) exchange completed, (ii) deliverables submitted, and (iii) results shared.

The DGM Global Fellowship is a two-week exchange where a fellow (DGM IPLC grantee) visits another DGM country to learn about, and share, DGM experiences, and best practices.

“global fellows” – IPLC recipients of DGM Global Learning Fellowship

“exchange completed” – DGM Fellow travels to another DGM country for a two-week exchange and collects information on the DGM project.

“deliverables submitted” – report on exchange and media material collected.

“results shared” – knowledge acquired, including photos and videos, shared with GEA and NEA in host and origin country.

To be considered as “completed and achieved their learning objectives,” the fellow needs to fulfill both criteria.

### Indicator Name

**Name:** Capacity-building activities under DGM (number) (disaggregated by type)

**Corporate**

**Unit of Measure**

**Baseline**

0.00

**End Target**

10.00

**Frequency**

Semiannual

**Data Source / Methodology**

Review of deliverables and monitoring report

**Responsibility for Data Collection**

GEA

### Description

This indicator captures the total number of capacity-building activities the DGM Global organizes and facilitates.

“capacity building” - time spent developing relevant skills that can be used to increase awareness of other DGM-related projects and enhance engagement in climate action and sustainable forestry.
The World Bank
Additional Financing for DGM Program and Global Learning and Knowledge Exchange Project (P170861)

<tr>
<td>Description: The indicator is related to the number of activities and/or alliances under IPLC leadership that emerged through the DGM global platform. “activities and/or alliances” – Any association, whether momentary (activity) or persistent (alliance) which works jointly toward a common purpose in line with IPLC and/or DGM priorities. “IPLC leadership” - indigenous peoples and/or local communities in leadership roles. “Global platform” – DGM Global activities such as global and fellow exchanges, DGM side events in relevant conferences and forums (e.g.: UNFCCC, SBSTA, IIPFCC etc.), and Global Steering Committee meetings. “emerged through the global platform” – was created at least partially as a result of the DGM Global project (e.g., stemming from a connection made between actors during an exchange) This will be measured by reviewing DGM deliverables and monitoring of activities. The GEA keeps a running list of activities and alliances, as defined above, that count toward this indicator.</td>

<td></td>
<td></td>
<td></td>
<td>GSC meetings</td>
<td></td>
</tr>
</tbody>
</table>

**Description:** This indicator will measure and monitor the Global Steering Committee’s provision of fiduciary and general oversight to the DGM program.

"GSC": GSC is the governing body of the DGM and provides strategic oversight and intellectual and policy guidance to the program. It is composed of IPLC members drawn from the DGM National Steering Committees in DGM countries.

“fiduciary and general oversight”: the GSC had oversight over DGM Global and mediates complaints and grievance issues if requested by the NSC. The GSC also approves the annual work program and budget to be implemented by DGM Global.

### Intermediate Results Indicators

<table>
<thead>
<tr>
<th>Indicator Name</th>
<th>Corporate</th>
<th>Unit of Measure</th>
<th>Baseline</th>
<th>End Target</th>
<th>Frequency</th>
<th>Data Source / Methodology</th>
<th>Responsibility for Data Collection</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name: Number of person-hours of capacity building and/or knowledge exchange in global exchanges (number)</td>
<td>Number</td>
<td>0.00</td>
<td>10000.00</td>
<td>Semiannual</td>
<td>Review of exchange attendance sheet and agenda</td>
<td>GEA</td>
<td></td>
</tr>
</tbody>
</table>

**Description:** “person-hours” – a metric of overall engagement with exchange participants calculated by adding the time spent by each participant in capacity-building and knowledge-sharing activities

“capacity-building” – time spent developing relevant skills that can be used to enhance engagement in climate action and sustainable forestry

“knowledge exchange” – time spent learning about key topics from exchange facilitators and other participants to enable more effective engagement in climate action
and sustainable forestry

“global exchanges” – events hosted by DGM Global, convening DGM stakeholders from different countries within a region or around the world, as opportunities for capacity building and knowledge exchange.

Attendance sheets are used to track the number of participants at global knowledge exchanges hosted by DGM GEA. These are cross-referenced against the agenda for the day’s training to determine how many hours of capacity building and/or knowledge exchange took place on that day. The basic formula for calculating person-hours for each day is as follows:

\[
\text{# of participants} \times \text{# of hours of capacity building and knowledge exchange} = \text{person-hours}
\]

Members of the GEA team who were present for the exchange verify that participants were present for the whole day and that the agenda was followed.

<table>

Description: “exchange participants” – IPLC representative that attend a global learning exchange

“report satisfaction” – a percentage of exchange participations that report satisfaction with exchange and capacity building opportunities on a satisfaction survey administered by GEA

This indicator measures the satisfaction percentage with respect to the project’s exchanges and related capacity building.

Satisfaction related to the percentage of whether exchanges are effective and meet the demand of exchange participants.

Exchange participants are those that participated in Global exchanges. This is measured through a review of surveys by the GEA.

<td>GEA</td>
</tr>
</tbody>
</table>

Description: “GSC members” – current Global Steering Committee members from each DGM country, elected by country National Steering Committee.

“transparent” – open and accountable – does the DGM openly share information on its activities with relevant stakeholders and the public?

“inclusive” – encouraging equitable participation across demographic groups (race, gender, age, community, nationality etc.)

This data will be collected as part of an annual survey during the annual GSC meeting. The numerator of this indicator will be the number of survey respondents [GSC members] who affirm that they view the DGM as both transparent and inclusive. The denominator will be the total number of survey respondents [GSC members].

This indicator is designed to complement the country project standard indicator “% of DGM stakeholders that perceive DGM governance and processes as transparent and inclusive.”

Name: Percent Satisfaction of GSC Members (level of commitment) (percent) | Percentage | 0.00     | 80.00      | Annual    | Annual perception survey                                                                | GEA                               |
**Indicator Name**

**Corporate Unit of Measure**  
**Baseline**  
**End Target**  
**Frequency**  
**Data Source / Methodology**  
**Responsibility for Data Collection**

**Description:** This indicator measures the satisfaction percentage with respect to the project’s intervention focus.

Satisfaction relates to the percentage of whether project interventions are effective and meet the demand of the project beneficiaries [GSC members].

Beneficiaries [GSC members] are those that are part of the global steering committee and who attend annual global steering committee meetings.

<table>

<td>GEA</td>
</tr>
</tbody>
</table>

**Description:** This indicator measures the effectiveness of Grievances Redress Mechanism (GRM). It is a simple percentage of (a) the number of grievances made and (b) the number of these grievances that are addressed.

“grievances” – Anything submitted through the grievance redress mechanisms of the DGM (generally, but not exclusively, questions, concerns, and complaints)

“received by” – Grievances can be submitted directly to the DGM Global project in person or by telephone, email, or mail, as detailed at www.dgmglobal.org/grievance-mechanism

“elevated to” – When a grievance received at the country level cannot be adequately addressed, it is elevated to the global level for consideration

“addressed” – When a grievance has been through the established process of the project’s grievance redress mechanism, and any reasonable actions to resolve a grievance have been exercised, it is considered addressed.

Any grievances received at or elevated to the global level will be listed on the DGM Global website, as well as any actions taken to address them. To calculate this percentage, the numerator is the number of grievances that have been classified by the GSC as “addressed” or “resolved” and the denominator is the total number of grievances received.

<table>

</tr>
</tbody>
</table>

**Description:** “average” – arithmetic mean of values collected from the past three months

“monthly unique visitors” – measures how many unique IP addresses visited the DGM Global website in a given calendar month

“DGM Global website” - www.dgmglobal.org and/or other pages within the same domain

The DGM Global website is built using Squarespace, which reports various metrics on website performance. The GEA will collect Squarespace’s data on unique visitors for each of the past three months and find the simple average of these values.

Any grievances received at or elevated to the global level will be listed on the DGM Global website, as well as any actions taken to address them. To calculate this percentage, the numerator is the number of grievances that have been classified by the GSC as “addressed” or “resolved” and the denominator is the total number of grievances received.

**Name:** Publications and communication materials/tools that advance the field of IPLC-led conservation (number)

<table>
<thead>
<tr>

APPENDIX A: DETAILED PROJECT DESCRIPTION AND IMPLEMENTATION ARRANGEMENTS

1. Phase 1 of the Global Learning and Knowledge Exchange Project has established a platform for capacity-building and strengthening partnerships among and between IPLC organizations, and it serves as a chapeau or umbrella for the program as a whole, including the country DGM projects. The current project (Phase 2 DGM Global project) will be utilizing resources built in Phase 1 of the DGM Global project to continue strengthening capacities of DGM IPLCs and share knowledge and learning from the DGM to a wider IPLC community.

2. The Project Development Objective is to strengthen networks and partnerships for DGM Indigenous Peoples and Local Communities (IPLCs) at regional and global levels.

   The project will finance the following components and activities:

   - Component 1: Global and Regional Learning
   - Component 2: Governance and Partnerships
   - Component 3: Monitoring, Reporting, GRM, Communications, and Project Management

3. Component 1. Global and Regional Learning (the estimated amount is US$ 569,000). The focus of this component is to organize and facilitate knowledge exchange, learning, and capacity building on forests and climate change issues at regional and global levels. Particularly this component will provide trainings and south-south exchanges of regional and global relevance. Activities under this component have a global or regional scope and include:

4. Sub-Component 1.1 – DGM Learning Exchanges: organizing global capacity building and learning exchanges to learn from the successful implementation of community-led DGM projects and other relevant experiences.

5. Sub-Component 1.2 DGM Fellow Exchanges: organizing a series of bilateral short-term targeted exchanges to DGM country projects to share IPLC expertise and experiences between DGM countries and across regions.
6. Notably, this component will facilitate DGM IPLCs to learn from technical experts and from successful community/Indigenous Peoples’ REDD+ projects, for example, on benefit-sharing, land tenure, climate-smart agriculture, sustainable forest management, and other issues which the GSC identifies. The global and regional learning activities under this component will be identified and discussed on annual basis during GSC meetings and presented to the World Bank in an annual project work plan.

7. **Component 2: Governance and Partnerships (the estimated amount is US$ 792,000)**. This component will help to enable the GSC to fulfill its role within the DGM. Given the wide range of the GSC’s functions, a significant portion of DGM Global activities is devoted to providing the necessary resources to the GSC as outlined below:

8. **Sub-Component 2.1 - Secretariat of the Global Steering Committee**: providing the necessary secretariat services to the GSC meetings, GSC Subcommittees, and Co-chairs. facilitating GSC meetings and enabling the GSC to fulfill its role as the overall governing body of the DGM to provide fiduciary and general oversight to the program. The GEA will organize, coordinate, service, and report on the GSC meetings, which will take place on an annual basis in a central, accessible location.

9. The GSC is the governing body of the DGM and provides strategic oversight and intellectual and policy guidance to the program. It will be composed of a majority of IPLC members drawn from the DGM National Steering Committees in DGM countries. Observers in the GSC could include one or more MDBs, UNPFII, some FIP country governments, and one or two members from the World Bank. The GSC’s responsibilities include promoting consistency in implementation of the program across the DGM countries, identifying activities for the global project, approving the Global project budget, reviewing and approving amendments to the DGM Framework Operations Guidelines, and facilitating a complaints redress and mediation mechanism. The GSC is also responsible for the broader dissemination of the lessons from the DGM and to report on the lessons and results to the FIP Sub-Committee on an annual basis. The first phase of the DGM Global project has formally constituted the GSC and is fully operational. The second phase of the DGM Global will use an existing GSC mechanism as established under the DGM Framework Operations Guidelines.

10. **Sub-Component 2.2 – Managing IPLC partnerships**: facilitating the engagements of DGM IPLC partners at relevant international policy dialogues, forums, and processes including but not limited to (i) UNFCCC, (ii) UNPFII, (iii)IIIPFCC, (iv)FCPF. As described in the DGM Framework Operational Guidelines of the DGM, referred to as the “Global Component,” this sub-component 2.2 will support the GSC in strengthening their capacities and serving the DGM as a governing body, representing their respective DGM and non-DGM countries at the GSC. Additionally, this sub-component will support GSC participation in forests, REDD+ and climate
change-related events, including but not limited to trainings on international negotiations, and relevant international policy dialogues and processes. The GSC will carry out external outreach on the program to organizations such as UNPFII, (United Nations Permanent Forum on Indigenous Issues), UN-REDD, GEF, IFAD, FCPF, global and regional IPLC organizations, and other organizations and donors working on, influencing or funding IPLC work, REDD+, and other forest and climate mechanisms. The GEA will provide the necessary logistical and technical support on this activity.

11. **Component 3: Monitoring, Reporting, GRM, Communications, and Project Management (US$939,000).** The component will cover the costs for implementation of DGM Global communications, robust monitoring and reporting (M&R), and an efficient project-related Grievance and Redress Mechanism (GRM). Additionally, this component covers the incremental operational, technical, and managerial costs of the GEA team to carry out its tasks and overall responsibilities required to support the management, monitoring, reporting and communications of project activities. The project will finance staff, consultants, goods, and operational costs for the GEA. Expected outputs include:

12. **Sub-Component 3.1. Monitoring and Reporting of the DGM Global Project:** The GEA will conduct monitoring and reporting on the results and overall performance of the global project, and compile and report the results of Country Projects. The activities under this component are not a substitute for the monitoring and reporting that DGM projects in the countries will carry out as per Bank requirements for all investment projects. GEA will coordinate actively with NEAs in DGM countries to monitor and document the overall implementation progress of the DGM. The NEAs will provide information to the GEA through these standard formats for a DGM-wide compilation of progress reports. The GEA will provide advice and coordination to NEAs to ensure that information from national-level monitoring efforts flows effectively to reporting on progress toward achieving global indicators. The GEA will compile the data and report the results of the DGM program. The GEA will deliver the following reports - a DGM Annual report, and a DGM semi-annual progress report.

13. **Sub-Component 3.2. Grievance and Redress Mechanism of the DGM Global Project:** As outlined in the Framework Operational Guidelines, the GSC will facilitate a grievance redress mechanism with support from the GEA for matters that are not resolved at the country level and are referred to the GSC. This sub-component will maintain and facilitate the functioning of a DGM Global grievance redress mechanism, based on the process outlined in the Framework Operational Guidelines for the DGM, and work with a sub-committee of the GSC to ensure that the GSC is active and responsive to complaints and grievances that may advance to the GSC for resolution through a GRM mechanism that was already established under the first phase of the DGM Global project by using an EthicsPoint, a third-party system for grievance reporting.
14. **Sub-Component 3.3. Communication and knowledge management of the DGM Global Project.** Communications and outreach for the DGM, including a website and other appropriate online communication tools, will be an essential part of the Phase 2 of the DGM Global project. This project is designed to address knowledge management and capacity building needs at the regional and global levels. Communication and coordination among the DGM countries are an essential input to ensuring that the capacity building and learning activities designed under this project are relevant and reflect the needs and lessons from DGM Country Projects. The GEA will liaise, collaborate, and coordinate actively with the NEAs and GSC Global Communications Team (GCT) to conduct communications and outreach activities, including the dissemination of culturally appropriate and inclusive information across DGM communication channels. The project will ensure the sufficient flow of information and broad availability and accessibility of the DGM results and impacts, both nationally and globally. This includes the procurement of goods and services such as translation, interpretation, and graphic design for the preparation and delivery of reports and knowledge products. This project will use an existing DGM Global website to organize information and facilitate knowledge exchange, learning, and capacity development to increase the participation and learning of DGM grantees and other IPLCs from both DGM and non-DGM countries working on REDD+. The website will focus on bringing the voices of DGM IPLC grantees to a global platform to share lessons learned, challenges, and progress, promoting such innovative techniques as digital storytelling. The GEA will coordinate with the NEAs to ensure that digital content generated at the national level will flow effectively to the global website and that non-digital content will be available employing other global information tools to ensure the availability of culturally appropriate knowledge resources for use by IPLCs globally.

15. **Sub-Component 3.4. Management of the DGM Global Executing Agency:** supporting the project management, strategic planning, and logistical coordination required to ensure the successful implementation of the DGM Global project.

16. The GEA will prepare a provisional work plan and budget for each year of the second phase DGM Global Project, and it will be submitted to the World Bank. Revisions to the provisional work plan and budget for each year will be submitted no later than 30 days after the approval by the GSC of the Strategic Plan for the second phase of the Global Project.

17. The GEA will submit annual and semi-annual reports to the GSC related to the ongoing implementation of Phase 2 of the Global Project and DGM Country Projects following receiving a ‘no objection’ from the WB.

18. The following reports will be prepared and submitted by the GEA:
- **Semi-annual implementation progress report** on the activities of the DGM Country Projects and Phase 2 of the Global Project in a format based on the common reporting framework developed in collaboration with the NEA’s and to be agreed on with the World Bank and to be submitted within 60 days after the end of the reporting semesters, which will be agreed on with the GEA. The information in the semi-annual progress report related to the Country Projects will be compiled from the information provided by the NEAs. This report should include descriptions of DGM Country activities, progress, lessons and results, details of the portfolio in the countries and the activities of the global project, status of implementation, funding allocations for the previous period, and other pertinent information.

- **Annual Report** on Phase 2 of the DGM Global will be submitted in a format to be agreed on with the World Bank and to be submitted 90 days after the conclusion of the reporting year. Dates will be agreed on with the GEA and the World Bank.

- Project Completion Report to be submitted within six months after the implementation of all activities under the second phase of the DGM Global project.

19. All such reports and deliverables shall be prepared in English and translated, upon the GSC’s request, in any or all working languages of the DGM. All reports prepared by the NEAs that form the basis of the semi-annual report to the GSC and the annual report and any other reporting required of the NEAs to complete the reporting responsibilities of the GEA will be submitted to the GEA in English and the national language. All reports and deliverables shall be submitted in electronic format to the GSC and the World Bank.

20. In addition to the above reporting to the GSC, the GEA shall report in the agreed on format to the World Bank on financial aspects of the second phase of the DGM Global project. These reports should be submitted on a semi-annual basis, within 60 days of the end of the reporting semester. If situations occur that require additional reporting for World Bank’s review, input, or action, submission dates will be agreed on with the GEA on a case-by-case basis.
APPENDIX B: GRIVEVANCE AND REDRESS MECHANISM

1. The DGM has a three-tiered complaints redress mechanism and complaints handling structure, with an appeals procedure and escalation provisions. The GSC and GEA play an essential role in facilitating coordination and communication between the country projects and the global project to anticipate and facilitate discussion about escalating grievances. The DGM three-step grievance redress mechanism (GRM) managed by the NEAs at the country level and the GEA at the global level consist of:
   i. Record and acknowledge complaints received;
   ii. Encourage immediate, on-the-spot resolution of issues; and,
   iii. Provide reports in the public domain on complaints received and actions taken.

2. As outlined in the DGM Framework Operational Guidelines, the GSC oversees a global-level GRM with support from the GEA for grievances that are not solved at the country level. The GEA has developed the procedures for the mechanism at the GSC level. The GSC selected members to participate in a Grievance Redress Subcommittee during the 3rd GSC Meeting in Brasilia, Brazil in 2017. The subcommittee has worked with the GEA to ensure that the GSC is responsive to any complaints or grievances that may advance to the global level for resolution.

3. As approved by the Global Steering Committee in their April 2018 Annual Meeting in Arlington, DGM Global revised the system for managing grievances and complaints. In the new system, grievances will first be submitted to an independent third-party system called EthicsPoint to determine the appropriate point of contact to address the grievance. This system was launched in early 2019. Information on past grievances and DGM Global GRM is available at https://www.dgmglobal.org/accountability
APPENDIX C: ECONOMIC ANALYSIS

1. Phase 1 and Phase 2 of the DGM Global project (“Global Project”) is a platform for capacity building and strengthening networks and partnerships among and between IPLC organizations. This serves as an umbrella promoting internal and external outreach, networking and knowledge exchange between DGM activities in the DGM countries as well as FIP, and other REDD+ countries, monitoring and learning as well as reporting on the program. The Project Development Objective is to organize and facilitate knowledge exchange, learning, capacity building activities, and strengthen networks and partnerships for DGM Indigenous Peoples and Local Communities (IPLCs) at regional and global levels.

Economic Analysis Methodology

2. By design, this project is technical assistance to support the knowledge management system and provide capacity building to the beneficiaries. While it is possible to some extent to assess cost benefits for the country-based DGM projects, the regular methods are challenging to apply in the context of the Global Project.

3. One of the commonly applied approaches to assess the efficiency of these projects is the cost-comparison method when the cost of the project or its elements is compared to the projects with similar outcomes. The DGM global project is designed in a similar way as many other projects of this kind – umbrella or chapeau knowledge platform designed to provide capacity building, technical assistance to the set of DGM country projects, and facilitate or manage knowledge exchange among beneficiaries. Composition and the overall cost of the phase one DGM Global Project and the phase two DGM Global project are compatible with other projects of this kind (Table 1).

Table 1. examples of KM and Capacity Building Coordination Environmental Projects
### Projects Benefits

4. Direct and indirect benefits of this project are difficult to measure in economic terms. However, the anticipated impact of the knowledge shared and received by the beneficiaries is immense. A limited list of the DGM outcomes includes:

- Broader and potentially more transformational effects/impacts than earlier predicted.
- Substantive outcomes: better governance, higher recognition, increased efficiency, improved land rights, better natural resource management, and income generation.
- Enabling outcomes: more ownership and trust, transparent governance.
The outcomes for other stakeholders include an improved relationship with IPLCs, and IPLCs being more accepting of REDD+ and the FIP.

5. While it is not possible to assess the direct benefits associated with this project, some assumptions can be made based on the relevant studies. For example, assessment of the benefits derived as a result of the knowledge acquired on improved forest management, secured tenure, NTFP value chain, etc. There are many various impacts we could assume as a result of the knowledge exchange process, one of them is indirect impact as a result of the gained knowledge on sustaining secure community forest tenure.

6. Recent WRI 2015 benefit-costs analyses of Brazil’s Indigenous Territories and the community concessions in Guatemala’s Maya Biosphere Reserve categorized the following benefits and costs related to the secured tenure (see Figure 2 below):

Figure 2. List of Benefits and Costs in the Forestry and Environmental Management projects

7. The study suggests that securing community forest tenure is a low-cost, high-benefit

---

investment that benefits communities, countries, and global society. The results of the analyses propose that investing in strong community forest tenure security can be a cost-effective measure for climate-change mitigation when compared with other mitigation measures.

8. A World Resources Institute analyses showed that the estimated annual per hectare costs of securing community forest tenure are low compared to the benefits of carbon mitigation and timber and non-timber production. For Brazil, annual costs average US$1.57 per hectare (ha), while carbon-mitigation benefits range from $230/ha to $38/ha per year over the analysis period. For Guatemala, annual costs are estimated at $16.85/ha while carbon-mitigation benefits range from $187/ha to $120/ha, and timber and nontimber production benefits are $12.51/ha and $0.91/ha. In Brazil, the net present value results (benefits minus costs) range from $1,454 to $1,743 per hectare and $162 billion to $194 billion for all Indigenous Territories in the Brazilian Amazon. WRI team estimated the cost of carbon mitigation (per tonne of CO2 emissions removed from the atmosphere) through a 20-year investment in forest-tenure security to be between $0.39 and $0.52/tCO2 (Table ES-1).

9. In Guatemala, the net present value per hectare ranges from $1,715 to $2,280 and from $605 million to $805 million for all nine active community concessions. The carbon-mitigation cost per tonne of CO2 emissions removed from the atmosphere through a 20-year tenure security investment is estimated to range from $7.37 to $8.50 (Table ES-2).

Discussion
10. One of the significant elements of this project is Knowledge Management (KM) and Knowledge Exchange. The ultimate goal of Knowledge Management is to facilitate the process of knowing from instrumental knowledge to codified knowledge. The three economic perspectives may contribute to obtaining the ultimate goal of KM, as shown in the figure 3\textsuperscript{12}:

\textbf{Figure 3. The process of knowing and contributions of the three economic perspectives.}

![Diagram of Knowledge Management process](image)

11. Quantifying benefits by applying this scheme in project accounting and by collecting data across various projects with knowledge management interventions might provide some basis for assessment of the effectiveness of the knowledge management systems.

12. Cost-benefit analysis is appropriate for the organizational systems where measurements are available for the increase in productivity as a result of the improved knowledge received/shared. The investment cost of the KM system is categorized in capital expenditures and operating expenditures. On the contrary, the cost-saving, increasing the quality of products, and employee productivity and speed are considered as the benefits. The fuzzy rule-based system is used to calculate the expected revenue increase, and the Monte-Carlo simulation method is applied to determine the expected NPV of KM system investment at different certainty levels.\textsuperscript{13} Application of this method would be appropriate if cost-saving values are known for the global environmental coordination projects.

APPENDIX D: PROCUREMENT, FINANCIAL MANAGEMENT AND DISBURSEMENT SCHEDULE

Procurement:

A. General

1. Procurement for the proposed project would be carried out in accordance with the World Bank’s Procurement Regulations for Borrowers under Investment Policy Financing (July 2016, revised August 2018) (“Procurement Regulations”) in addition to the provisions stipulated in the Legal Agreement. Any procurement activity will start before the approval of the procurement plan by the Bank. The PIU will follow the Bank’s Anticorruption Guidelines and will not engage the services of firms and individuals suspended and debarred by the Bank.

2. For each contract to be financed by the grant, the different procurement methods, the need for prequalification, estimated costs, prior review requirements, and time frame are agreed on between the project implementing agency and the Bank project team in the procurement plan. The procurement plan will be updated at least annually or as required to reflect the actual project implementation needs and improvements in institutional capacity.

3. **Staffing:** DGM Global Executing Agency is staffed with one Procurement staff having good experience with the World Bank-financed projects. The procurement specialist has experience with the Bank’s new procurement regulations, and has suitable experience on contract management as he handled similar contracts during the implementation of Phase I of this project. To implement efficiently the project, the Bank will provide timely support in addition to capacity building on some specific challenges faced during the project.

- **Procurement of Works:** There will be no procurement of Works.

- **Procurement of Goods:** Goods procured will include computers, tablets, cell phones, and software licenses.

- **Procurement of non-consulting services:** Non-consulting services will include translations, printing, and other vendor services.
- **Selection of Consultants:** Individual consultants and consulting firms will be selected in accordance with the methods agreed on in the approved procurement plan.

4. The GEA will prepare the terms of reference (TORs) and bidding documents ahead of the estimated date of issuance mentioned in the approved procurement plan. All TORs will be reviewed and cleared by the Bank. The GEA will submit for the Bank’s no objection, only bidding documents under prior review.

### B. Assessment of the Agency’s Capacity to implement Procurement

5. Procurement activities will be carried out by Conservation International Foundation (CI) through its DGM Global Executing Agency (GEA) located in Arlington, VA, USA. This agency already implemented Phase 1 of the DGM Program and Global Learning and Knowledge Exchange Project (P128748) from December 2018 to December 2020. The project implementing agency will be responsible for all procurement and contracting related queries and processing, including management and compliance with fiduciary requirements. DGM Global Executing Agency is staffed with a procurement specialist and has managed several projects financed by the World Bank for more than ten years. Nevertheless, DGM Global Executing Agency has limited experience with the Bank’s procurement regulations. As this project will be composed of non-complex consulting services and small goods contracts, the procurement risk is considered **moderate**.

### C. Procurement Plan

6. DGM Global Executing Agency will develop an annual spending plan to be agreed on with the World Bank. Based on this plan, the list of contracts to be signed and to be financed by the grant will be listed in a procurement plan that the Bank shall approve before each yearly program implementation.

### D. World Bank Prior Review

7. Goods and services contracts costing US$50,000 or less shall be procured in accordance with competitive commercial practices based on quotations received, usually from at least three reliable and qualified suppliers. These contracts will be subject to post-review. Prior review thresholds are mentioned in the approved procurement plan.
**E. Frequency of procurement supervision mission**

8. In addition to any prior review to be carried out by the World Bank qualified Procurement Accredited Staff, an implementation supervision mission will also be conducted each year till the grant closing date.

**Financial Management:**

9. *The proposed operation is an Investment Project Financing*, supported by a grant from the Strategic Climate Fund in the amount of US$2.3 million and to achieve the Project Development Objective to organize and facilitate knowledge exchanges, learning, capacity building activities, and to strengthen networks and partnerships for DGM Indigenous Peoples and Local Communities (IPLCs) at regional and global levels through the following components i) Component 1: Global and Regional Learning (the estimated amount is US$569,000). ii) Component 2: Governance and Partnerships (the estimated amount is US$792,000) and (iii) Component 3: Monitoring, Reporting, Communications, Project Management (the estimated amount is US$939,000).

10. In connection with the above IPF operation funded by Trust fund, a financial management capacity assessment of Conservation International – Arlington USA, the implementing agency, has been conducted in line with the Financial Management Practice Manual for World Bank-financed Investment Operations, which became effective on December 11, 2014. The objective of the assessment was to determine whether the implementing agency (IA) has in place acceptable financial management arrangements to ensure that: (i) the funds will be used only for their intended purposes in an efficient and economical way; (ii) accurate and timely periodic financial reports will be prepared; and (iii) the assets will be safeguarded.

11. The observations of the FM capacity assessment of Conservation International, USA, conducted in August 2019 observed that the IA had made acceptable FM arrangements, including having professional staffing and tools in place to manage the resources of the DGM operation. The FM team is headed by a qualified and experienced Finance Director and assisted by a Sr. Finance Manager and controlled by a Senior Director for review clearance and submission of financial reports to prospective donors. The IA has had past experiences in implementing World Bank grants and other well-known donor-financed operations. The fiduciary team needs further refreshment clinics to bring them to updated changes in FM policies and procedures requirements of the World Bank. They have in place acceptable FM procedures manual, and the accounting software used is Business World...
(formerly known as Agresso) as their enterprise resource planning system. Business World provides integrated financial, project, and grant-making data, ensuring the accurate and timely management of information in any country of performance. This accounting system can track revenue and expenditures by project/donor. Transactions entered into the system are placed into the workflow and must be approved before it is being posted. Month-end reconciliations are prepared and reviewed by separate employees. Therefore, the financial system is fully computerized.

12. The organization's Finance Division includes an accounting department and a budget and reporting department that both roll up under the Chief Financial Officer. To maintain enough independence from the work, the Internal Audit department has no direct operational responsibility or authority over any of the activities being reviewed and reports to the General Counsel administratively but to CI's Audit Committee functionally. Within the Finance Department, there are segregation of duties for incoming and outgoing cash related transactions, including but not limited to bank reconciliations, payment initiation, payment approval, and release are all performed by separate team members. The CFO is a CPA with over 20+ years of accounting and non-profit experience. The Controller is also a CPA with over 10+ years of accounting and non-profit experience. The Director of Internal Audit is a CPA with over 15+ years of experience in accounting including seven years specifically with non-profits.

13. Additionally, CI undergoes an institutional external audit annually. The auditors expressed a clean opinion (unqualified) in 2016, 2017, and 2018 annual accounts of projects implemented by the IA and the reports are acceptable to the World Bank.

14. The use of the current FM team of Conservation International, Arlington, VA, USA to manage the financial management aspects of the project will enable the establishment of a financial fiduciary management system for the project that satisfies the Bank’s minimum requirements under Bank policy and directives regarding investment project financing (IPF). Based on the findings of the assessment, the following actions are required to ensure effective FM systems: (i) Prepare the detailed budgets in line with grant agreed activities; ii) opening a Designated Account (DA) in an acceptable commercial bank in Crystal City, Arlington, USA for receiving funds from the World Bank; (iii) configuring/customizing the accounting software Business World (formerly Agresso) which is IA’s enterprise resource planning system. To allow the recording of project transactions and the preparation of financial reports; (iv) drafting of a short Note as an Annex to the existing FM Manual to reflect the Bank’s FM procedures and requirements and (v) prepare an annual budget for each fiscal year of implementation. These actions are to be completed in a timely manner to help implement the project: actions (i) to (iv) are dated covenants and should be implemented not later than two months after the effective date of the project.
15. **Reporting.** The IA will be required to prepare and submit to the World Bank the following reports and documents: (i) an annual work program and budget (AWPB) not later than [TBD] of the year preceding the year the work plan should be implemented; (ii) biannual unaudited interim financial reports (IFR) within 60 days following the end of each six month period; and (iii) audited annual financial statements not later than 6 months following the end of each fiscal year. A financial reporting template has been agreed with the IA.

16. **Disbursements.** Upon the effective date of the TF Grant, IFR based disbursement will be used. The project will finance 100 percent of eligible expenditures inclusive of taxes. The DA in dollars opened in the commercial bank (Bank of America) located in Washington, DC, USA, under terms and conditions acceptable to the World Bank will be used to receive and make payment for eligible expenditures under the grant agreement. The ceiling of the DA will be stated in the Disbursement and Financial Information Letter (DFIL) and will represent four to six months of forecasted project expenditures expected to be paid from the DA during Year 1 and based on the AWPB of Year 1. The initial six-month project expenditure will be paid as advance into the DA, and subsequent disbursements will be made against submission of IFR on the use of the initial/previous advance. Other methods of disbursing the funds (for example, reimbursement) will also be available to the project. The minimum value of applications for such methods will be 20 percent of the DA’s ceiling. The project will sign and submit Withdrawal Applications electronically using the eSignatures module accessible from the World Bank’s Client Connection website. The IA will then utilize funds for expenditures such as - contractors/service providers/travel and other eligible expenditures. Misappropriated activities of procurement could result in the suspension of financing of the grant.

17. **Supervision.** The Risk assessment was **High**; however, the mitigation measures in place will bring the risk to MODERATE. Close monitoring of the project will be conducted, and the risk will be revisited and evaluated during such mission. At least one full supervision missions are planned over the first year of implementation.

18. **Audit:** CI will conduct a project audit by independent auditor for each fiscal year of the project. Such audited financial reports will be submitted to the World Bank within 6 months from FY year-end of IA. The project IA will comply with the World Bank’s disclosure policy of audit reports and place the information provided on the official website within two months of the report being accepted as final by the team and the World Bank.

19. The World Bank’s FM assessment concluded that Conservation International’s FM arrangements meet the World Bank’s minimum requirements under OP/BP10. The overall residual risk rating is **moderate.**
APPENDIX E: GLOBAL LEARNING FELLOWSHIP PROGRAM – CONCEPT

1. **Objective:** To provide DGM beneficiaries with the opportunity to participate in focused two-week learning exchanges to other DGM countries where they can learn from, and share knowledge and experiences with, other communities.

2. **Eligibility:** DGM Beneficiaries, NSC Members, and sub-project coordinators will be eligible to apply. Applicants should demonstrate cumulative experience at the national and local level, be more than 18 years old, and have a willingness to travel alone or with up to 1 other fellow. GEA, NEA, and GSC members do not qualify.

3. **Application:**
   - Personal Information
   - Statement of Grant Purpose. Applicant must write a 1-2-page statement of grant purpose including:
     - Personal statement on their background, knowledge, and experience
     - Desired DGM Country, research topic, and research method
     - Topic to share & exchange with communities and knowledge sharing approach
   - Letter of endorsement from the participant’s community of origin
   - Request for Affiliation Letter addressed to host country NEA (must include point of contact information and signature of both origin NEA rep and candidate)
   - Estimated Budget and Draft Agenda

4. **Deliverables:**
   - Completion of training on communications and content collection
   - Media content (photos, videos, interviews, stories, etc.)
   - Written consent to share content collected with DGM GEA and Country NEAs for dissemination
   - Completion of DGM GEA survey
   - Final report
   - Receipts of expenses

5. **Host NEA Role:** Due to the host NEA’s expertise and familiarity with the country and national DGM program, the NEA will provide inputs
to the fellow’s grant purpose. The host NEA will also provide support and orientation to the fellow prior to, upon arrival, and throughout the duration of the two-week exchange. Support includes scheduling meetings and opportunities for engagement with host country communities and DGM stakeholders. If the fellow does not speak the host country’s language, the host NEA will provide interpretation support to facilitate the fellow’s learning and communication. The NEA will provide logistical input on travel arrangements and ensure that the fellow schedules their exchange during a strategic time of year where the fellow would be able to participate in activities and visits to communities.

6. **DGM Global Role:** Due to its role as the executing agency of the fellowship program, DGM Global will provide programmatic and financial support to fellows. Financial support would include up to USD 7,000 per fellow for up to 12 fellows and would consist of media equipment, such as a video camera or Smartphone, to collect related media content. DGM Global would also provide logistical support, training opportunities, travel insurance, and additional guidance on the fellow’s grant purpose.

7. **Potential Research Topics** can include but will not be limited to Land Tenure, Sustainable Forest Management, Income Generation, Gender, Project Management and Communications, Partnerships, and more.

8. **Workflow Chart for Process for Selection:**
Figure 1. Process Selection for the Global Learning Fellowship

Workflow Chart for Process for Implementation:
Additional Financing for DGM Program and Global Learning and Knowledge Exchange Project

**Figure 2. Global Learning Fellowship Implementation Process**

1. Coordinate and budget logistical/travel arrangements

2. Sign Fellowship/Travel Agreement

3. Budgeted travel amount issued to Fellow

4. Provide all receipts for budgeted travel amount to GEA

5. Provide trainings to candidate on country overview, RBA training, etc.

6. Deliver Media Equipment

7. Confirm final in-country Schedule and Agenda

8. Travel to Host Country for Exchange

9. Facilitate hosting, interpretation, and exchange

11. Deliver Part 2 Report and Media on Dissemination of Lessons Learned in Community

12. Complete Exchange Survey

FELLOWS EXCHANGE PROCESS FOR IMPLEMENTATION
