

IDA17 Results Measurement System (RMS)

October 2016

IDA, the [International Development Association](#), is the World Bank's fund for the world's poorest countries. The World Bank Group uses the **IDA Results Measurement System (IDA RMS)** to track and measure IDA operational results. The IDA RMS was introduced with IDA13 and has evolved over the years to become a robust accountability and management tool to focus on results in IDA countries. The IDA RMS exists separately so that the World Bank Group can report to IDA donors and stakeholders on progress under the current IDA Replenishment with policy commitments as well as development effectiveness specific to IDA recipient countries.

The current IDA17 RMS uses a four-tiered development results framework to track results at the country level and IDA performance:

Tier 1 indicators measure progress that IDA-eligible countries are making on 34 development indicators organized into these six categories:

- o Poverty eradication and shared prosperity goals
- o Inclusive growth and private sector development
- o Governance and institutional development infrastructure
- o Gender equality and human development.
- o Climate change and environment

Changes in Tier 1 indicators are not directly attributable to IDA's interventions.

Tier 2 indicators track development results in countries supported by IDA. They include indicators that measure the overall outcomes of IDA's Country Assistance Strategies Completion Reports (CASCRs) and operations in all IDA countries. Tier 2 also tracks aggregate project output indicators under five areas:

- o Governance and institutional development
- o Gender equality and human development
- o Vital infrastructure
- o Inclusive growth and private sector development
- o Climate and disaster resilience

Tier 3 indicators measure IDA's operational effectiveness of its products, notably on the performance of its portfolio, results orientation of the operations (including through the use of impact evaluations), the use of country public financial management and procurement systems, and the implementation of IDA17 special themes.

Tier 4 indicators measure IDA's organizational effectiveness to respond better to clients. Specifically, Tier 4 captures indicators to track efficiency, effectiveness and value for money in achieving development results. Tier 4 includes indicators on speed and cost of operational delivery and administrative costs; use of IDA commitments dedicated to impact evaluation and other evidence-based approaches and increased statistical capacity. In addition, there is one indicator to monitor IDA countries' feedback on the WBG responsiveness and staff accessibility, and collaboration with others partners, including in Fragile and Conflict States (FCSs).

¹ Data are updated for FY16 IDA eligible countries as of July 2016, where available.

² In October 2015, the World Bank updated the global poverty line to track progress on the goal of bringing down the number of people living in extreme poverty to less than 3 percent of the world population by 2030, therefore, the indicator “Population below US\$1.90 a day of 2011 PPP (%)” replaced the original indicator “Population below US\$1.25 a day of 2005 PPP (%)” that was in effect during the preparation of the IDA17 Deputies Report in March 2014.

³ The base year changed from 2005 to 2010. All previously reported values are adjusted to reflect 2010 base year.

¹¹ New indicator starting fiscal year 2015. Data is only applicable for projects approved since fiscal year 2014 when the CSI methodology was completed. For fiscal year 2015, only two projects (both in IBRD countries) were found to have projected lifetime energy savings of about 1.27 million MWh. Therefore the reported value for IDA was zero.

¹² Former descriptor name "Disbursement ratio for investment lending projects" replaced by "Disbursement ratio for project financing projects" to reflect new terminology.

¹³ Data for fiscal year 2015 and 2016 are not available because the total number of IEG-evaluated projects by the end of June 2016 were less than 60% of projects exited in each fiscal year. The number of IEG-evaluated IDA-financed projects in fiscal year 2014 increased compared to last reporting period.

¹⁴ Historical value updated to reflect larger number of project exits evaluated by IEG.

¹⁵ Calculation based on a total number of 12 IDA/IFC projects rated during FY16 - seven (58.3 %) of which were rated satisfactory or better. Source: IFC's Development Outcome Tracking System.

¹⁷ The indicator name is changed from “Expense to business revenue ratio (IBRD + IDA)” to “IDA Budget Anchor”, in line with the CSC and IDA Financial Statements. This indicator is now reported separately for IBRD and IDA. FY14 and FY15 data are adjusted for IDA only. The target is set.

¹⁸ The indicator name is changed from “IDA Budget Sustainability Anchor” to “Space Under IDA Budget Anchor” to align the terminology.

¹⁹ Historical value adjusted to reflect exclusion of Program-for-Results operations.
