To better understand WSS Utility Aggregation across a diversity of contexts, the overall global study investigated a set of 14 case studies in seven countries, centering on the stakeholders involved, the decisions made, the roles of sector actors and their incentives, and the perceived outcomes with a view to bringing forward the essence of each case experience.

The seven countries noted on this downloadable map include Brazil, Colombia, Hungary, Indonesia, Portugal, Mozambique, and Romania. The selection of countries and specific providers was done in a manner to ensure a diversity of geography, development levels, size, and aggregation process and scope, among other considerations.
