AN EARLY-WARNING INDICATOR FOR THE HUMAN CAPITAL PROJECT

The Human Capital Project seeks to raise awareness and increase demand for interventions to build human capital. It aims to accelerate better and more investments in people.

In low- and middle-income countries, the learning crisis means that deficits in education outcomes are a major contributor to human capital deficits. Shortcomings in both the quantity of schooling and especially its quality explain a large part of the distance to the frontier. Addressing these shortcomings will require a multisectoral approach.

For more information on the Human Capital Project, please visit www.worldbank.org/humancapitalproject

WHY MEASURE LEARNING POVERTY?

All children should be able to read by age 10. As a major contributor to human capital deficits, the learning crisis undermines sustainable growth and poverty reduction. This brief summarizes some of the critical aspects of a new synthetic indicator, Learning Poverty, designed to help spotlight and galvanize action to address this crisis.

Eliminating Learning Poverty is as urgent as eliminating extreme monetary poverty, stunting, or hunger. The new data show that more than half of all children in low and middle-income countries suffer from Learning Poverty.

WHAT IS LEARNING POVERTY?

Learning Poverty means being unable to read and understand a short, age-appropriate text by age 10. All foundational skills are important, but we focus on reading because: (i) reading proficiency is an easily understood measure of learning; (ii) reading is a student’s gateway to learning in every other area; and, (iii) reading proficiency can serve as a proxy for foundational learning in other subjects, in the same way that the absence of child stunting is a marker of healthy early childhood development.

HOW IS LEARNING POVERTY MEASURED?

This indicator brings together schooling and learning. It starts with the share of children who haven’t achieved minimum reading proficiency and adjusts it by the proportion of children who are out of school.

\[ LP = [BMP \times (1 - OoS)] + [1 \times OoS] \]

where, \( LP \) is Learning Poverty, \( BMP \) is share of children in school below minimum proficiency, \( OoS \) is the Percentage of Out-of-School children; and, in the case of \( OoS \) we assume \( BMP = 1 \).

The data used to calculate Learning Poverty has been made possible thanks to the work of the Global Alliance to Monitor Learning led by the UNESCO Institute for Statistics (UIS), which established Minimum Proficiency Levels (MPLs) that enable countries to benchmark learning across different cross-national and national assessments.

LEARNING POVERTY IN BAHRAIN

- **Learning Poverty.** 32 percent of children in Bahrain at late primary age today are not proficient in reading, adjusted for the Out-of-School children.
- **Out-of-School.** In Bahrain, 2 percent of primary school-aged children are not enrolled in school. These children are excluded from learning in school.
- **Below Minimum Proficiency.** Large-scale learning assessments of students in Bahrain indicate that 31 percent do not achieve the MPL at the end of primary school, proxied by data from grade 4 in 2016.

For countries with a very low Out-of-School population, the share of children Below Minimum Proficiency will be very close to the reported Learning Poverty.

Notes: The LP number for Bahrain is calculated using the Global Learning Assessment Database (GLAD) harmonization based on PIRLS and the MPL threshold used was level Low (400 points). For more details, please consult the GLAD and Learning Poverty repositories in GitHub.

BENCHMARKING BAHRAIN’S LEARNING POVERTY

Learning Poverty in Bahrain is 31.2 percentage points better than the average for the Middle East and North Africa region and 8.2 percentage points worse than the average for high income countries.

Notes: (1) Large circle represents Bahrain; (2) Small circles represent other countries; and, (3) Vertical lines reflect the averages of Bahrain’s region and income group.
How Does Bahrain’s Gender Gap Compare Globally?

As in most countries, Learning Poverty is higher for boys than for girls in Bahrain.

This result is a composition of two effects. First the share of Out-of-School children is higher for boys (2.9%) than for girls (1.2%).

And second boys are less likely to achieve minimum proficiency at the end of primary school (40.2%) than girls (21%) in Bahrain.

Table 1 shows sex disaggregation for Learning Poverty and HCI education components whenever available.

Data and Data Gaps on Learning and Schooling in Bahrain

Bahrain administer a National Large-Scale Assessment (NLSA) at the End of Primary school, according to UIS SDG 4.1.2b monitoring. Once this NLSA is mapped against UIS/SDG4.1.1 reporting standards it should be possible to monitor Learning Poverty with it.

According to the World Bank’s 2013 LeAP diagnostic analysis of Bahrain’s assessment system, the country’s ratings on large-scale assessment activities were Established (3 out of 4) on Cross-National Learning Assessment and Established (3 out of 4) on NLSA. To update results, contact the LeAP team.

The Out-of-School adjustment in our Learning Poverty indicator relies on enrollment data. Our preferred definition is the adjusted net primary enrollment as reported by UIS. This data relies both on the population Census and the EMIS. In the case of Bahrain, the preferred definition based on the EMIS data is for 2016.

Primary Education Expenditure

Primary education expenditure per child of primary education age in Bahrain is USD 5,350 (PPP), which is 3.5% below the average for the Middle East and North Africa region and 36.4% below the average for high income countries.

Data and Data Gaps on Learning and Schooling in Bahrain

Bahrain administer a National Large-Scale Assessment (NLSA) at the End of Primary school, according to UIS SDG 4.1.2b monitoring. Once this NLSA is mapped against UIS/SDG4.1.1 reporting standards it should be possible to monitor Learning Poverty with it.

According to the World Bank’s 2013 LeAP diagnostic analysis of Bahrain’s assessment system, the country’s ratings on large-scale assessment activities were Established (3 out of 4) on Cross-National Learning Assessment and Established (3 out of 4) on NLSA. To update results, contact the LeAP team.

The Out-of-School adjustment in our Learning Poverty indicator relies on enrollment data. Our preferred definition is the adjusted net primary enrollment as reported by UIS. This data relies both on the population Census and the EMIS. In the case of Bahrain, the preferred definition based on the EMIS data is for 2016.

Notes: The definition of NLSA does not include National Exams; LeAP: Learning Assessment Platform (LeAP-team@worldbank.org). TIMSS: Trends in International Mathematics and Science Study. PIRLS: Progress in International Reading Literacy Study.
