AN EARLY-WARNING INDICATOR FOR THE HUMAN CAPITAL PROJECT

The Human Capital Project seeks to raise awareness and increase demand for interventions to build human capital. It aims to accelerate better and more investments in people.

In low- and middle-income countries, the learning crisis means that deficits in education outcomes are a major contributor to human capital deficits. Shortcomings in both the quantity of schooling and especially its quality explain a large part of the distance to the frontier. Addressing these shortcomings will require a multisectoral approach.

For more information on the Human Capital Project, please visit www.worldbank.org/humancapitalproject

WHY MEASURE LEARNING POVERTY?

All children should be able to read by age 10. As a major contributor to human capital deficits, the learning crisis undermines sustainable growth and poverty reduction. This brief summarizes some of the critical aspects of a new synthetic indicator, Learning Poverty, designed to help spotlight and galvanize action to address this crisis.

Eliminating Learning Poverty is as urgent as eliminating extreme monetary poverty, stunting, or hunger. The new data show that more than half of all children in low and middle-income countries suffer from Learning Poverty.

WHAT IS LEARNING POVERTY?

Learning Poverty means being unable to read and understand a short, age-appropriate text by age 10. All foundational skills are important, but we focus on reading because: (i) reading proficiency is an easily understood measure of learning; (ii) reading is a student’s gateway to learning in every other area; and, (iii) reading proficiency can serve as a proxy for foundational learning in other subjects, in the same way that the absence of child stunting is a marker of healthy early childhood development.

HOW IS LEARNING POVERTY MEASURED?

This indicator brings together schooling and learning. It starts with the share of children who haven’t achieved minimum reading proficiency and adjusts it by the proportion of children who are out of school.

\[
LP = [BMP \times (1 - OoS)] + [1 \times OoS]
\]

where, \(LP\) is Learning Poverty, \(BMP\) is share of children in school below minimum proficiency, \(OoS\) is the Percentage of Out-of-School children; and, in the case of \(OoS\) we assume \(BMP = 1\).

The data used to calculate Learning Poverty has been made possible thanks to the work of the Global Alliance to Monitor Learning led by the UNESCO Institute for Statistics (UIS), which established Minimum Proficiency Levels (MPLs) that enable countries to benchmark learning across different cross-national and national assessments.

LEARNING POVERTY IN ALGERIA

- **Learning Poverty.** 68 percent of children in Algeria are not proficient in reading, adjusted for the Out-of-School children.
- **Out-of-School.** In Algeria, 4 percent of primary school-aged children are not enrolled in school. These children are excluded from learning in school.
- **Below Minimum Proficiency.** Large-scale learning assessments of students in Algeria indicate that 67 percent do not achieve the MPL at the end of primary school, proxied by data from grade 4 in 2007.

For countries with a very low Out-of-School population, the share of children Below Minimum Proficiency will be very close to the reported Learning Poverty.

HOW DOES ALGERIA'S GENDER GAP COMPARE GLOBALLY?

As in most countries, Learning Poverty is higher for boys than for girls in Algeria.

This result is a composition of two effects. First the share of Out-of-School children is lower for boys (3.2%) than for girls (5.1%).

And second boys are less likely to achieve minimum proficiency at the end of primary school (68.4%) than girls (64.6%) in Algeria.

Table 1 shows sex disaggregation for Learning Poverty and HCI education components whenever available.

DATA AND DATA GAPS ON LEARNING AND SCHOOLING IN ALGERIA

Algeria does not administer a National Large-Scale Assessment (NLSA) at the End of Primary school, according to UIS SDG 4.1.2b monitoring.

Algeria participated in the following published cross-national learning assessments in recent years: TIMSS (2007) and PISA (2015).

Algeria has not participated in the World Bank's LeAP diagnostic exercise to analyze its assessment system. To get started, contact the LeAP team.

The Out-of-School adjustment in our Learning Poverty indicator relies on enrollment data. Our preferred definition is the adjusted net primary enrollment as reported by UIS. This data relies both on the population Census and the EMIS. In the case of Algeria, the preferred definition based on the EMIS data is for 2007.

Notes: The definition of NLSA does not include National Exams; LeAP: Learning Assessment Platform (LeAP-team@worldbank.org). TIMSS: Trends in International Mathematics and Science Study. PISA: Programme for International Student Assessment.

POINT OF CONTACT

WHY MEASURE LEARNING POVERTY?

All children should be able to read by age 10. As a major contributor to human capital deficits, the learning crisis underlines sustainable growth and poverty reduction. This brief summarizes some of the critical aspects of a new synthetic indicator, Learning Poverty, designed to help spotlight and galvanize action to address this crisis.

Eliminating Learning Poverty is as urgent as eliminating extreme monetary poverty, stunting, or hunger. The new data show that more than half of all children in low and middle-income countries suffer from Learning Poverty.

WHAT IS LEARNING POVERTY?

Learning Poverty means being unable to read and understand a short, age-appropriate text by age 10. All foundational skills are important, but we focus on reading because: (i) reading proficiency is an easily understood measure of learning; (ii) reading is a student’s gateway to learning in every other area; and, (iii) reading proficiency can serve as a proxy for foundational learning in other subjects, in the same way that the absence of child stunting is a marker of healthy early childhood development.

HOW IS LEARNING POVERTY MEASURED?

This indicator brings together schooling and learning. It starts with the share of children who haven’t achieved minimum reading proficiency and adjusts it by the proportion of children who are out of school.

\[ LP = [BMP \times (1 - OoS)] + [1 \times OoS] \]

where, \( LP \) is Learning Poverty, \( BMP \) is share of children in school below minimum proficiency, \( OoS \) is the Percentage of Out-of-School children; and, in the case of \( OoS \) we assume \( BMP = 1 \).

The data used to calculate Learning Poverty has been made possible thanks to the work of the Global Alliance to Monitor Learning led by the UNESCO Institute for Statistics (UIS), which established Minimum Proficiency Levels (MPLs) that enable countries to benchmark learning across different cross-national and national assessments.

LEARNING POVERTY IN MOROCCO

- **Learning Poverty.** 66 percent of children in Morocco at late primary age today are not proficient in reading, adjusted for the Out-of-School children.

- **Out-of-School.** In Morocco, 5 percent of primary school-aged children are not enrolled in school. These children are excluded from learning in school.

- **Below Minimum Proficiency.** Large-scale learning assessments of students in Morocco indicate that 64 percent do not achieve the MPL at the end of primary school, proxied by data from grade 4 in 2016.

For countries with a very low Out-of-School population, the share of children Below Minimum Proficiency will be very close to the reported Learning Poverty.

Notes: The LP number for Morocco is calculated using the Global Learning Assessment Database (GLAD) harmonization based on PIRLS and the MPL threshold used was level Low (400 points). For more details, please consult the GLAD and Learning Poverty repositories in GitHub.

BENCHMARKING MOROCCO’S LEARNING POVERTY

Learning Poverty in Morocco is **2.5 percentage points worse** than the average for the Middle East and North Africa region and **10.7 percentage points worse** than the average for lower middle income countries.

Figure 1. Learning Poverty and components

Source: UIS and World Bank as of October 2019.

Notes: (1) Large circle represents Morocco; (2) Small circles represent other countries; and, (3) Vertical lines reflect the averages of Morocco’s region and income group.
HOW DOES MOROCCO’S GENDER GAP COMPARE GLOBALLY?

As in most countries, Learning Poverty is higher for boys than for girls in Morocco.

This result is a composition of two effects. First the share of Out-of-School children is lower for boys (5.3%) than for girls (5.6%).

And second boys are less likely to achieve minimum proficiency at the end of primary school (68.4%) than girls (59%) in Morocco.

Figure 2. Gender Gap - Learning Poverty by Sex

Source: UIS and World Bank as of October 2019. Notes: (1) - Large circle represents Morocco; and, (2) The closer a country is to the dotted line the smaller its LP gender gap.

PRIMARY EDUCATION EXPENDITURE

Primary education expenditure per child of primary education age in Morocco is USD 1,624 (PPP), which is 70.7% below the average for the Middle East and North Africa region and 95.1% above the average for lower middle income countries.

Figure 3. Expenditure per child in primary school age

Source: UIS and World Bank as of October 2019. Notes: Primary education expenditure per child is calculated as total expenditure on primary education divided by total number of children of primary school age. Data for Morocco is from 2013.

DATA AND DATA GAPS ON LEARNING AND SCHOOLING IN MOROCCO

Morocco administer a National Large-Scale Assessment (NLSA) at the End of Primary school, according to UIS SDG 4.1.2b monitoring. Once this NLSA is mapped against UIS/SDG4.1.1 reporting standards it should be possible to monitor Learning Poverty with it.

According to the World Bank’s 2015 LeAP diagnostic analysis of Morocco’s assessment system, the country’s ratings on large-scale assessment activities were Established (3 out of 4) on Cross-National Learning Assessment and Emerging (2 out of 4) on NLSA. For additional information, contact the LeAP team.

The Out-of-School adjustment in our Learning Poverty indicator relies on enrollment data. Our preferred definition is the adjusted net primary enrollment as reported by UIS. This data relies both on the population Census and the EMIS. In the case of Morocco, the preferred definition based on the EMIS data is for 2016.

Notes: The definition of NLSA does not include National Exams; LeAP: Learning Assessment Platform (LeAP-team@worldbank.org). TIMSS: Trends in International Mathematics and Science Study. PIRLS: Progress in International Reading Literacy Study.

HOW DOES IRAN, ISLAMIC REP.'S GENDER GAP COMPARE GLOBALLY?

As in most countries, Learning Poverty is higher for boys than for girls in Iran, Islamic Rep..

This result is a composition of two effects. First the share of Out-of-School children is lower for boys (0.9%) than for girls (0.9%).

And second boys are less likely to achieve minimum proficiency at the end of primary school (43.6%) than girls (25.4%) in Iran, Islamic Rep..

Table 1 shows sex disaggregation for Learning Poverty and HCI education components whenever available.

PRIMARY EDUCATION EXPENDITURE

Primary education expenditure per child of primary education age in Iran, Islamic Rep. is USD 2,385 (PPP), which is 37% below the average for the Middle East and North Africa region and 6.2% above the average for upper middle income countries.

Figure 3. Expenditure per child in primary school age

Source: UIS and World Bank as of October 2019. Note: Primary education expenditure per child is calculated as total expenditure on primary education divided by total number of children of primary school age. Data for Iran, Islamic Rep. is from 2017.

DATA AND DATA GAPS ON LEARNING AND SCHOOLING IN IRAN, ISLAMIC REP.

Iran, Islamic Rep. does not administer a National Large-Scale Assessment (NLSA) at the End of Primary school, according to UIS SDG 4.1.2b monitoring.

Iran, Islamic Rep. has not participated in the World Bank’s LeAP diagnostic exercise to analyze its assessment system. To get started, contact the LeAP team.

The Out-of-School adjustment in our Learning Poverty indicator relies on enrollment data. Our preferred definition is the adjusted net primary enrollment as reported by UIS. This data relies both on the population Census and the EMIS. In the case of Iran, Islamic Rep., the preferred definition based on the EMIS data is for 2016.

Notes: The definition of NLSA does not include National Exams; LeAP: Learning Assessment Platform (LeAP-team@worldbank.org). TIMSS: Trends in International Mathematics and Science Study. PIRLS: Progress in International Reading Literacy Study.

Disclaimer: The numbers presented in this brief are based on global data harmonization efforts conducted by UIS and the World Bank that increase cross-country comparability of selected findings from official statistics. For that reason, the numbers discussed here may be different from official statistics reported by governments and national offices of statistics. Such differences are due to the different purposes of the statistics, which can be for global comparison or to meet national definitions.

#investinPeople
AN EARLY-WARNING INDICATOR FOR THE HUMAN CAPITAL PROJECT

The Human Capital Project seeks to raise awareness and increase demand for interventions to build human capital. It aims to accelerate better and more investments in people.

In low- and middle-income countries, the learning crisis means that deficits in education outcomes are a major contributor to human capital deficits. Shortcomings in both the quantity of schooling and especially its quality explain a large part of the distance to the frontier. Addressing these shortcomings will require a multisectoral approach.

For more information on the Human Capital Project, please visit www.worldbank.org/humancapitalproject

WHY MEASURE LEARNING POVERTY?

All children should be able to read by age 10. As a major contributor to human capital deficits, the learning crisis undermines sustainable growth and poverty reduction. This brief summarizes some of the critical aspects of a new synthetic indicator, Learning Poverty, designed to help spotlight and galvanize action to address this crisis.

Eliminating Learning Poverty is as urgent as eliminating extreme monetary poverty, stunting, or hunger. The new data show that more than half of all children in low and middle-income countries suffer from Learning Poverty.

WHAT IS LEARNING POVERTY?

Learning Poverty means being unable to read and understand a short, age-appropriate text by age 10. All foundational skills are important, but we focus on reading because: (i) reading proficiency is an easily understood measure of learning; (ii) reading is a student’s gateway to learning in every other area; and, (iii) reading proficiency can serve as a proxy for foundational learning in other subjects, in the same way that the absence of child stunting is a marker of healthy early childhood development.

HOW IS LEARNING POVERTY MEASURED?

This indicator brings together schooling and learning. It starts with the share of children who haven’t achieved minimum reading proficiency and adjusts it by the proportion of children who are out of school.

\[ LP = [BMP \times (1 - OoS)] + [1 \times OoS] \]

where, \(LP\) is Learning Poverty, \(BMP\) is share of children in school below minimum proficiency, \(OoS\) is the Percentage of Out-of-School children; and, in the case of \(OoS\) we assume \(BMP = 1\).

The data used to calculate Learning Poverty has been made possible thanks to the work of the Global Alliance to Monitor Learning led by the UNESCO Institute for Statistics (UIS), which established Minimum Proficiency Levels (MPLs) that enable countries to benchmark learning across different cross-national and national assessments.

LEARNING POVERTY IN JORDAN

- **Learning Poverty.** 52 percent of children in Jordan at late primary age today are not proficient in reading, adjusted for the Out-of-School children.
- **Out-of-School.** In Jordan, 4 percent of primary school-aged children are not enrolled in school. These children are excluded from learning in school.
- **Below Minimum Proficiency.** Large-scale learning assessments of students in Jordan indicate that 50 percent do not achieve the MPL at the end of primary school, proxied by data from grade 4 in 2015.

For countries with a very low Out-of-School population, the share of children Below Minimum Proficiency will be very close to the reported Learning Poverty.

Note: The LP number for Jordan is calculated using the Global Learning Assessment Database (GLAD) harmonization based on TIMSS and the MPL threshold used was level Low (400 points). For more details, please consult the GLAD and Learning Poverty repositories in GitHub.

BENCHMARKING JORDAN’S LEARNING POVERTY

Learning Poverty in Jordan is 11.3 percentage points better than the average for the Middle East and North Africa region and 23.1 percentage points worse than the average for upper middle income countries.

Figure 1. Learning Poverty and components

Source: UIS and World Bank as of October 2019.
Note: (1) Large circle represents Jordan; (2) Small circles represent other countries; and, (3) Vertical lines reflect the averages of Jordan’s region and income group.
HOW DOES JORDAN’S GENDER GAP COMPARE GLOBALLY?

As in most countries, Learning Poverty is higher for boys than for girls in Jordan.

This result is a composition of two effects. First the share of Out-of-School children is higher for boys (5.2%) than for girls (2.8%).

And second boys are less likely to achieve minimum proficiency at the end of primary school (52.8%) than girls (46.7%) in Jordan.

Such differences are due to the different purposes of the statistics, which can be for global comparison or to meet national definitions.
AN EARLY-WARNING INDICATOR FOR THE HUMAN CAPITAL PROJECT

The Human Capital Project seeks to raise awareness and increase demand for interventions to build human capital. It aims to accelerate better and more investments in people.

In low- and middle-income countries, the learning crisis means that deficits in education outcomes are a major contributor to human capital deficits. Shortcomings in both the quantity of schooling and especially its quality explain a large part of the distance to the frontier. Addressing these shortcomings will require a multisectoral approach.

For more information on the Human Capital Project, please visit [www.worldbank.org/humancapitalproject](http://www.worldbank.org/humancapitalproject)

WHY MEASURE LEARNING POVERTY?

All children should be able to read by age 10. As a major contributor to human capital deficits, the learning crisis undermines sustainable growth and poverty reduction. This brief summarizes some of the critical aspects of a new synthetic indicator, Learning Poverty, designed to help spotlight and galvanize action to address this crisis.

Eliminating Learning Poverty is as urgent as eliminating extreme monetary poverty, stunting, or hunger. The new data show that more than half of all children in low and middle-income countries suffer from Learning Poverty.

WHAT IS LEARNING POVERTY?

Learning Poverty means being unable to read and understand a short, age-appropriate text by age 10. All foundational skills are important, but we focus on reading because: (i) reading proficiency is an easily understood measure of learning; (ii) reading is a student’s gateway to learning in every other area; and, (iii) reading proficiency can serve as a proxy for foundational learning in other subjects, in the same way that the absence of child stunting is a marker of healthy early childhood development.

HOW IS LEARNING POVERTY MEASURED?

This indicator brings together schooling and learning. It starts with the share of children who haven’t achieved minimum reading proficiency and adjusts it by the proportion of children who are out of school.

\[
LP = [BMP \times (1 - OoS)] + [1 \times OoS]
\]

where, \(LP\) is Learning Poverty, \(BMP\) is share of children in school below minimum proficiency, \(OoS\) is the Percentage of Out-of-School children; and, in the case of \(OoS\) we assume \(BMP = 1\).

The data used to calculate Learning Poverty has been made possible thanks to the work of the Global Alliance to Monitor Learning led by the UNESCO Institute for Statistics (UIS), which established Minimum Proficiency Levels (MPLs) that enable countries to benchmark learning across different cross-national and national assessments.

LEARNING POVERTY IN BAHRAIN

- **Learning Poverty.** 32 percent of children in Bahrain at late primary age today are not proficient in reading, adjusted for the Out-of-School children.
- **Out-of-School.** In Bahrain, 2 percent of primary school-aged children are not enrolled in school. These children are excluded from learning in school.
- **Below Minimum Proficiency.** Large-scale learning assessments of students in Bahrain indicate that 31 percent do not achieve the MPL at the end of primary school, proxied by data from grade 4 in 2016.

For countries with a very low Out-of-School population, the share of children Below Minimum Proficiency will be very close to the reported Learning Poverty.

**Notes:** The LP number for Bahrain is calculated using the Global Learning Assessment Database (GLAD) harmonization based on PIRLS and the MPL threshold used was level Low (400 points). For more details, please consult the GLAD and Learning Poverty repositories in GitHub.

BENCHMARKING BAHRAIN’S LEARNING POVERTY

Learning Poverty in Bahrain is **31.2 percentage points better** than the average for the Middle East and North Africa region and **8.2 percentage points worse** than the average for high income countries.

**Figure 1. Learning Poverty and components**

Source: UIS and World Bank as of October 2019.

**Notes:** (1) Large circle represents Bahrain; (2) Small circles represent other countries; and, (3) Vertical lines reflect the averages of Bahrain’s region and income group.
HOW DOES BAHRAIN'S GENDER GAP COMPARE GLOBALLY?

As in most countries, Learning Poverty is higher for boys than for girls in Bahrain.

This result is a composition of two effects. First the share of Out-of-School children is higher for boys (2.9%) than for girls (1.2%).

And second boys are less likely to achieve minimum proficiency at the end of primary school (40.2%) than girls (21%) in Bahrain.

Table 1 shows sex disaggregation for Learning Poverty and HCI education components whenever available.

Table 1. Sex Disaggregation

Source: UIS and World Bank for LP, BMP and OoS as of October 2019. EdStats/WDI for HCI and LAYS; The Full Learning Poverty database is available for download at the Development Data Hub.

PRIMARY EDUCATION EXPENDITURE

Primary education expenditure per child of primary education age in Bahrain is USD 5,350 (PPP), which is 3.5% below the average for the Middle East and North Africa region and 36.4% below the average for high income countries.

DATA AND DATA GAPS ON LEARNING AND SCHOOLING IN BAHRAIN

Bahrain administer a National Large-Scale Assessment (NLSA) at the End of Primary school, according to UIS SDG 4.1.2b monitoring. Once this NLSA is mapped against UIS/SDG4.1.1 reporting standards it should be possible to monitor Learning Poverty with it.

According to the World Bank’s 2013 LeAP diagnostic analysis of Bahrain’s assessment system, the country’s ratings on large-scale assessment activities were Established (3 out of 4) on Cross-National Learning Assessment and Established (3 out of 4) on NLSA. To update results, contact the LeAP team.

The Out-of-School adjustment in our Learning Poverty indicator relies on enrollment data. Our preferred definition is the adjusted net primary enrollment as reported by UIS. This data relies both on the population Census and the EMIS. In the case of Bahrain, the preferred definition based on the EMIS data is for 2016.

LEARNING POVERTY IN SAUDI ARABIA

- Learning Poverty. 38 percent of children in Saudi Arabia at late primary age today are not proficient in reading, adjusted for the Out-of-School children.
- Out-of-School. In Saudi Arabia, 3 percent of primary school-aged children are not enrolled in school. These children are excluded from learning in school.
- Below Minimum Proficiency. Large-scale learning assessments of students in Saudi Arabia indicate that 37 percent do not achieve the MPL at the end of primary school, proxied by data from grade 4 in 2016.

For countries with a very low Out-of-School population, the share of children Below Minimum Proficiency will be very close to the reported Learning Poverty.

Notes: The LP number for Saudi Arabia is calculated using the Global Learning Assessment Database (GLAD) harmonization based on PIRLS and the MPL threshold used was level Low (400 points). For more details, please consult the GLAD and Learning Poverty repositories in GitHub.

BENCHMARKING SAUDI ARABIA’S LEARNING POVERTY

Learning Poverty in Saudi Arabia is 25 percentage points better than the average for the Middle East and North Africa region and 14.4 percentage points worse than the average for high income countries.

Figure 1. Learning Poverty and components

Source: UIS and World Bank as of October 2019.
Notes: (1) Large circle represents Saudi Arabia; (2) Small circles represent other countries; and, (3) Vertical lines reflect the averages of Saudi Arabia’s region and income group.
HOW DOES SAUDI ARABIA’S GENDER GAP COMPARE GLOBALLY?

In Saudi Arabia, lack of data prevents comparisons of Learning Poverty for boys and girls.

Table 1 shows sex disaggregation for Learning Poverty and HCI education components whenever available.

PRIMARY EDUCATION EXPENDITURE

Primary education expenditure per child of primary education age in Saudi Arabia is USD 8,627 (PPP), which is 55.5% above the average for the Middle East and North Africa region and 2.6% above the average for high income countries.

DATA AND DATA GAPS ON LEARNING AND SCHOOLING IN SAUDI ARABIA

Saudi Arabia administer a National Large-Scale Assessment (NLSA) at the End of Primary school, according to UIS SDG 4.1.2b monitoring. Once this NLSA is mapped against UIS/SDG4.1.1 reporting standards it should be possible to monitor Learning Poverty with it.

Saudi Arabia has not participated in the World Bank’s LeAP diagnostic exercise to analyze its assessment system. To get started, contact the LeAP team.

The Out-of-School adjustment in our Learning Poverty indicator relies on enrollment data. Our preferred definition is the adjusted net primary enrollment as reported by UIS. This data relies both on the population Census and the EMIS. In the case of Saudi Arabia, the preferred definition based on the EMIS data is for 2014.

Saudi Arabia: Laura Gregory
Middle East and North Africa: Laura Gregory

Disclaimer: The numbers presented in this brief are based on global data harmonization efforts conducted by UIS and the World Bank that increase cross-country comparability of selected findings from official statistics. For that reason, the numbers discussed here may be different from official statistics reported by governments and national offices of statistics. Such differences are due to the different purposes of the statistics, which can be for global comparison or to meet national definitions.
AN EARLY-WARNING INDICATOR FOR THE HUMAN CAPITAL PROJECT

The Human Capital Project seeks to raise awareness and increase demand for interventions to build human capital. It aims to accelerate better and more investments in people.

In low- and middle-income countries, the learning crisis means that deficits in education outcomes are a major contributor to human capital deficits. Shortcomings in both the quantity of schooling and especially its quality explain a large part of the distance to the frontier. Addressing these shortcomings will require a multisectoral approach.

For more information on the Human Capital Project, please visit [www.worldbank.org/humancapitalproject](http://www.worldbank.org/humancapitalproject)

WHY MEASURE LEARNING POVERTY?

All children should be able to read by age 10. As a major contributor to human capital deficits, the learning crisis undermines sustainable growth and poverty reduction. This brief summarizes some of the critical aspects of a new synthetic indicator, Learning Poverty, designed to help spotlight and galvanize action to address this crisis.

Eliminating Learning Poverty is as urgent as eliminating extreme monetary poverty, stunting, or hunger. The new data show that more than half of all children in low and middle-income countries suffer from Learning Poverty.

WHAT IS LEARNING POVERTY?

Learning Poverty means being unable to read and understand a short, age-appropriate text by age 10. All foundational skills are important, but we focus on reading because: (i) reading proficiency is an easily understood measure of learning; (ii) reading is a student’s gateway to learning in every other area; and, (iii) reading proficiency can serve as a proxy for foundational learning in other subjects, in the same way that the absence of child stunting is a marker of healthy early childhood development.

HOW IS LEARNING POVERTY MEASURED?

This indicator brings together schooling and learning. It starts with the share of children who haven't achieved minimum reading proficiency and adjusts it by the proportion of children who are out of school.

\[ LP = \left( BMP \times (1 - OoS) \right) + \left( OoS \right) \]

where, \( LP \) is Learning Poverty, \( BMP \) is share of children in school below minimum proficiency, \( OoS \) is the Percentage of Out-of-School children; and, in the case of \( OoS \) we assume \( BMP = 1 \).

The data used to calculate Learning Poverty has been made possible thanks to the work of the Global Alliance to Monitor Learning led by the UNESCO Institute for Statistics (UIS), which established Minimum Proficiency Levels (MPLs) that enable countries to benchmark learning across different cross-national and national assessments.

LEARNING POVERTY IN ISRAEL

- **Learning Poverty.** 12 percent of children in Israel at late primary age today are not proficient in reading, adjusted for the Out-of-School children.
- **Out-of-School.** In Israel, 3 percent of primary school-aged children are not enrolled in school. These children are excluded from learning in school.
- **Below Minimum Proficiency.** Large-scale learning assessments of students in Israel indicate that 9 percent do not achieve the MPL at the end of primary school, proxied by data from grade 4 in 2016.

For countries with a very low Out-of-School population, the share of children Below Minimum Proficiency will be very close to the reported Learning Poverty.

Notes: The LP number for Israel is calculated using the Global Learning Assessment Database (GLAD) harmonization based on PIRLS and the MPL threshold used was level Low (400 points). For more details, please consult the GLAD and Learning Poverty repositories in GitHub.

BENCHMARKING ISRAEL’S LEARNING POVERTY

Learning Poverty in Israel is 51.6 percentage points better than the average for the Middle East and North Africa region and 12.2 percentage points better than the average for high income countries.

Figure 1. Learning Poverty and components

Source: UIS and World Bank as of October 2019.

Notes: (1) Large circle represents Israel; (2) Small circles represent other countries; and, (3) Vertical lines reflect the averages of Israel’s region and income group.
HOW DOES ISRAEL’S GENDER GAP COMPARE GLOBALLY?

As in most countries, Learning Poverty is higher for boys than for girls in Israel.

This result is a composition of two effects. First the share of Out-of-School children is higher for boys (3.5%) than for girls (2.4%).

And second boys are less likely to achieve minimum proficiency at the end of primary school (11.4%) than girls (6.6%) in Israel.

Table 1 shows sex disaggregation for Learning Poverty and HCI education components whenever available.

PRIMARY EDUCATION EXPENDITURE

Primary education expenditure per child of primary education age in Israel is USD 8,228 (PPP), which is 48.3% above the average for the Middle East and North Africa region and 2.2% below the average for high income countries.

DATA AND DATA GAPS ON LEARNING AND SCHOOLING IN ISRAEL

Israel administer a National Large-Scale Assessment (NLSA) at the End of Primary school, according to UIS SDG 4.1.2b monitoring. Once this NLSA is mapped against UIS/SDG4.1.1 reporting standards it should be possible to monitor Learning Poverty with it.

Israel has not participated in the World Bank’s LeAP diagnostic exercise to analyze its assessment system. To get started, contact the LeAP team.

The Out-of-School adjustment in our Learning Poverty indicator relies on enrollment data. Our preferred definition is the adjusted net primary enrollment as reported by UIS. This data relies both on the population Census and the EMIS. In the case of Israel, the preferred definition based on the EMIS data is for 2016.
