WORLD BANK GROUP
SUPPORT TO SMALL STATES

SMALL STATES
WORLD BANK GROUP
Small States face unique development challenges. Due to their small population and economic base, these countries are particularly vulnerable to exogenous shocks, such as natural disasters and climate change. With limited economic opportunities and significant migration, they often face capacity constraints.
The Small States Forum (SSF) is an important platform for high-level dialogue on how the Bank Group is helping to address Small States’ special development needs. The SSF comprises 50 members, including 42 countries classified as Small States according to the Bank Group definition (i.e., those with a population of 1.5 million or less) and eight other Small States Forum members with a population greater than 1.5 million that share similar challenges.²

While sharing common challenges associated with the small size of their economies and vulnerability to exogenous shocks, the SSF is a very diverse group. There is high variation among members in terms of population size, income levels, geography and other features that result in a wide spectrum of development outcomes. A few examples are provided below.

### POPULATION
Many SSF members are micro states (i.e., with a population of less than 200,000 people). Population size ranges from 11,000 people in Tuvalu to 2.9 million people in Jamaica.

### GEOGRAPHY
SSF countries are distributed across all regions and about two thirds are island states. The remaining one third includes five land-locked countries (Bhutan, Botswana, Eswatini,³ Lesotho, and San Marino).

### REMOTENESS
Several SSF countries, particularly islands, are among the most remote in terms of distance to the nearest international markets (e.g., Pacific islands).

### LAND AREA
A number of island states have a very small land area (e.g., Nauru has 20 square kilometers), while non-island states such as Namibia and Botswana have 4.5 and 3.1 times the area of all small island states combined, respectively.

---

² Botswana, Gabon, The Gambia, Guinea Bissau, Jamaica, Lesotho, Namibia and Qatar.
³ Formally known as Swaziland.
FRAGMENTATION AND DISPERSION • Some countries are archipelagos dispersed over a broad ocean area (e.g., Kiribati has an area of 810 square kilometers distributed in 35 atolls/islands spread over 3.6 million square kilometers of ocean).

VULNERABILITY TO NATURAL DISASTERS AND CLIMATE CHANGE • Many SSF countries are disproportionately vulnerable to a range of natural disasters, particularly those located in disaster-prone areas. About one third of Small States are highly vulnerable to climate change, including rising sea-level and droughts.

DEBT BURDEN • Significant growth volatility, relatively slower growth and weak fiscal management have contributed to substantial debt accumulation in many SSF countries. Debt levels for these countries are on average higher than for other developing countries, although there is considerable diversity across individual countries.

While the spread of the COVID19 infection has been contained in most Small States, the economic and social impact is especially severe. Many small states are highly dependent on external flows such as tourism, commodity exports, and/or remittances—which have sharply declined amidst the pandemic-induced global recession.

• Real GDP in many Small States is projected to contract by double digits in 2020 compared to a 5.2 percent contraction in World GDP, with countries highly dependent on tourism suffering the deepest declines.

• The economic contraction comes with high social costs, particularly in terms of job losses. Simulations carried out for the Caribbean and the Pacific show that formal employment could decline by around one quarter to one-third, depending on the scenario.

• Moreover, with already limited fiscal space, high indebtedness, and limited creditworthiness, most Small States face unprecedented challenges to adequately respond to the global pandemic.
The World Bank Group has a long-standing and growing commitment to supporting Small States’ development efforts. Small States are a priority for the entire Bank Group, including the International Development Association (IDA), the International Bank for Reconstruction and Development (IBRD), the International Finance Corporation (IFC), and the Multilateral Investment Guarantee Agency (MIGA).

In recent years, World Bank Group support to Small States has been ramping up, particularly in four broad areas:

I. Enhancing development finance
II. Developing innovative disaster and climate financing mechanisms
III. Fostering private investment and diversification
IV. Strengthening client capacity
IDA has been the leading multilateral provider of development assistance to small economies, accounting for 28 percent of multilateral official development assistance (ODA) to the SSF members in 2014-16.

Small States have particularly benefited from the past four IDA replenishments primarily due to an increase in IDA’s annual minimum base allocation from SDR 1.5 million in IDA15 to SDR 15 million in IDA18, resulting in a massive scale up in IDA18 to US$2.9 billion in lending commitments (including IDA financing windows).

With the recent re-classification of Fiji, there are 24 IDA-eligible SSF members of which 21 are Small States that receive IDA Credits on the most concessional lending terms that IDA offers, Small Economy Terms—at no interest, 40-year amortization, with a 10-year grace period.

In IDA18, Small Economy Terms (originally applicable to Small Island Economies) were extended to the four IDA-eligible Small States that are not islands (Bhutan, Djibouti, Guyana, Timor-Leste). These countries will continue to receive IDA Credits on Small Economy Terms during IDA19.

I. ENHANCING DEVELOPMENT FINANCE

IDA FINANCING OF SSF COUNTRIES

IDA has been the lynchpin of Bank support to Small States. In recognition of their unique development challenges, IDA has extended special treatment to Small States in terms of access, financing volumes, and concessionality.

Access to IDA resources

IDA provides concessional resources to the world’s poorest countries—those with a per capita income of $1,185 or below. Countries are eligible for IDA resources based on relative poverty and lack of creditworthiness. Based on creditworthiness considerations and policies targeted to address Small States’ special needs—such as the Small Island Economies Exception introduced in 1985—many Small States have access to IDA resources even though their per capita incomes are above the income threshold for receiving IDA support. In all, 24 SSF countries have access to IDA resources, including 21 who receive the most concessional terms that IDA offers. Seven of these countries have Blend Country status (i.e. are eligible to borrow from both IBRD and IDA).

Volume of IDA resources

A ten-fold increase in IDA’s minimum annual base allocation from SDR⁴ 1.5 million in IDA15 to SDR 15 million in IDA18 has particularly benefitted small economies. In terms of actual financing, total IDA commitments (including IDA financing windows) to IDA-eligible SSF members more than doubled in IDA18 relative to IDA17, increasing

---

4 The SDR is an international reserve asset, created by the IMF in 1969 to supplement its member countries’ official reserves. The value of the SDR is based on a basket of five currencies—the U.S. dollar, the Euro, the Chinese renminbi, the Japanese yen, and the British pound sterling. (Source: IMF)
WORLD BANK RECOGNITION OF SMALL ISLANDS’ SPECIAL NEEDS SINCE 1985: THE “SMALL ISLAND ECONOMIES EXCEPTION”

In 1985, the World Bank’s Board approved the Small Island Economies Exception in recognition of small islands’ special characteristics (of size, remoteness, etc.) resulting in similar challenges to those faced by low-income countries. At the time, six Small Island Economies (SIEs) that were due to graduate from IDA were granted the Exception.

Currently, 16 Small Island Economies with GNI per capita above the IDA operational cut off receive special treatment from IDA under the exception, including 10 SIEs with IDA-only status and seven Blend SIEs.*

In March 2019, the SIE Exception Policy was revised to include (a) criteria for considering requests from IBRD-only SIEs to be reclassified as IDA-eligible; and (b) criteria for calibrating the terms on which IDA concessional resources are provided to SIEs. Pursuant to the revised policy, Fiji was reclassified as an IDA-eligible country effective July 1, 2019.

Most IDA-only SSF countries receive grants based on debt distress ratings determined under the World Bank/IMF Debt Sustainability Framework for low-income countries (LIC-DSF). A revised LIC-DSF, effective July 2018, expands the stress testing framework in order to more systematically capture the specific circumstances faced by Small States, such as vulnerability to natural disasters.

Credit terms for IDA eligible Small States are IDA’s most concessional terms. In all, IDA Credits on Small Economy Terms in FY18 had a grant element of 61 percent, compared to a grant element of 53 percent for IDA Credits on IDA Regular Terms.

IDA concessional financing terms

Most IDA-only SSF countries receive grants based on debt distress ratings determined under the World Bank/IMF Debt Sustainability Framework for low-income countries (LIC-DSF). A revised LIC-DSF, effective July 2018, expands the stress testing framework in order to more systematically capture the specific circumstances faced by Small States, such as vulnerability to natural disasters.

Credit terms for IDA eligible Small States are IDA’s most concessional terms. In all, IDA Credits on Small Economy Terms in FY18 had a grant element of 61 percent, compared to a grant element of 53 percent for IDA Credits on IDA Regular Terms.

5. IDA offers concessional credits on “Regular Terms,” “Blend Terms,” and “Small Economy Terms.” For definitions and details of IDA financial terms and conditions see Bank Policy: Financial Terms and Conditions of Bank Financing.
Additional opportunities for financing: IDA’s Windows
IDA-eligible SSF countries also have access to additional financing from various IDA windows, notably, the Crisis Response Window (CRW), the Regional Program, and the new Private Sector Window (PSW) introduced in IDA18.6

IBRD FINANCING OF SSF COUNTRIES
Twenty-three SSF members have access to IBRD financing, of which 16 countries are IBRD-only and seven have access to both IBRD and IDA resources (Blend Countries). IBRD lending commitments to SSF members between FY15-20 amounted to over $2.1 billion. In per-capita terms, Montenegro has been the top IBRD borrower ($898), followed by Gabon ($412) and Jamaica ($366).

Thanks to the Capital Increase policy package endorsed by IBRD shareholders in 2018, eligible Small States will benefit from a doubling of their IBRD base allocation and a waiver from price increases.

6 Other windows include the Scale-up Facility and the Regional Sub-Window for Refugee and Host Communities. Note that Blend and Gap countries are not eligible to access the PSW unless they are classified as fragile.
WORLD BANK RESPONSE TO COVID 19

While the Bank Group has a range of crisis response financing and operational tools to support clients in addressing natural and economic shocks, the severe impact of the COVID19 pandemic has prompted extraordinary measures. These include the rapid mobilization of IDA and IBRD financing, under the Fast Track COVID19 Facility (FTCF), as well as efforts to provide temporary debt relief for the poorest countries, including IDA-eligible SSF countries.

IDA. IDA is further scaling up resources to help eligible SSF countries cope with the health, social and economic impacts of the pandemic. In addition to enabling the frontloading of country allocations under IDA19, IDA has made available additional resources from the Crisis Response Window (CRW) to fund emergency operations under the FTCF. Since the onset of the pandemic, IDA has provided about $51 million from the Facility to 11 SSF countries for health operations aimed at disease containment, diagnosis, and treatment while also strengthening health systems; including countries with relatively high infection rates (e.g. Cabo Verde, Djibouti, Maldives, Sao Tome and Principe). The second phase of the Bank’s COVID19 response focuses on addressing the pandemic’s economic and social impacts which have been especially severe in SSF countries highly dependent on tourism (e.g. several economies in the Caribbean and the Pacific).

IBRD. With enhanced financing capacity and more affordable terms for eligible Small States, IBRD is well positioned to help these countries respond to the COVID19 pandemic. Since the onset of the pandemic, IBRD lending to SSF members under the FTCF has amounted to $35 million. These resources have mostly funded health response operations in countries with relatively high numbers of cases (e.g. Suriname, Eswatini, Trinidad and Tobago). After several years of inactive lending, some IBRD-only Small states have resumed IBRD borrowing while others with active IBRD portfolios have expanded their programs in FY20 and FY21.

Temporary debt relief. IDA-eligible SSF members can participate in the Debt Service Suspension Initiative (DSSI), endorsed by the Bank Group Governors at the 2020 Spring Meetings. The initiative aims at postponing bilateral debt service payments in low-income countries so that freed resources can be used to respond to the COVID19 pandemic. To date twelve SSF countries are participating in the DSSI thereby reducing debt service payments in 2020 by about $170 million, with freed-up resources ranging from 0.2 to 1.6 percent of GDP.

II. DEVELOPING INNOVATIVE DISASTER AND CLIMATE FINANCING MECHANISMS

The World Bank has an extensive track record of supporting the development and implementation of innovative financing mechanisms for crisis response and climate change, which given their vulnerabilities, are particularly relevant for small economies.

Disaster and Crisis response

Since its seminal introduction in IDA15, the IDA Crisis Response Window (CRW) has provided additional resources totaling $344 million to help
several eligible SSF members respond to severe natural disasters (e.g. tropical storms, floods, droughts) and currently to the unfolding COVID19 pandemic.

In 2018, Dominica received $50 million in CRW resources to help the reconstruction following Hurricane Maria, which resulted in damages estimated at 226 percent of GDP. Tonga also received $20 million from the CRW following Tropical Cyclone Gita, which caused damages estimated at 38 percent of GDP.

The Disaster Risk Management Development Policy Financing with a Catastrophe Drawdown Option (CAT-DDO) can provide immediate liquidity to countries in the aftermath of a natural disaster. As a policy instrument, it supports the systemic and institutional improvement of climate and disaster risk management through a transformative reform agenda. The funds are preapproved based on a sound disaster risk management program and an adequate macroeconomic framework. The CAT-DDO is available to both IBRD countries and IDA countries (since IDA18). In FY2020, CAT-DDOs were approved for six SSF members in a total amount of $108 million.

The Bank has also supported the establishment of two successful regional risk insurance pools—the Caribbean Catastrophe Risk Insurance Facility (CCRIF) and the Pacific Catastrophe Risk Assessment and Financing Initiative (PCRAFI). Since its launch in 2007, CCRIF has paid out US$150 million including the last pay out of approximately US$11 million for the Bahamas following Hurricane Dorian in 2019. The PCRAFI paid US$3.5 million to Tonga after Tropical Cyclone Gita in 2018.

Climate Finance: Turning vulnerability into opportunity

The Bank Group is working with Small States to develop innovative climate finance mechanisms. These mechanisms are particularly relevant for IBRD-only Small States that are not eligible for IDA financing.

The World Bank supported the issuance of the world’s first blue bond in the Seychelles. A $20 million World Bank package approved in September 2017—to improve the sustainability of the Seychelles’ marine resources—including an IBRD guarantee of EUR5 million that enabled the issuance of a $15 million blue bond in 2018. The World Bank Treasury provided technical assistance for structuring of the blue bond. The proceeds of the bond are used as grants for fisheries management activities as well as loans to encourage local public and private investment in sustainable fishing and the protection of ocean resources.

Green bonds provide another opportunity for small states to raise climate financing. In October 2017, Fiji, a small island exposed to floods and tropical cyclones, became the first emerging market to issue a sovereign green bond. The 100 million Fijian dollar ($50 million) bond received overwhelming interest from domestic investors. The bond was structured with technical assistance from the World Bank Treasury and the IFC under a three-year Capital Markets Development Project, supported by the Australian Government. The proceeds of the bond will be used to fund projects promoting low carbon and climate resilient growth consistent with Fiji’s Green Growth Framework.
III. FOSTERING PRIVATE INVESTMENT AND DIVERSIFICATION

Private investment is a key driver of any country’s economic development. However, Small States face challenges in attracting private investment due to their small market size, limited economic opportunities, and often remoteness. The Bank Group seeks to promote private investment in Small States through its private arm, the International Finance Corporation (IFC) and the Multilateral Investment Guarantee Agency (MIGA) as well as by strategically leveraging IDA and IBRD financing.

IFC AND MIGA

IFC is supporting economic diversification and building resilience in sectors such as finance, infrastructure, agriculture, tourism and services. IFC also offers various de-risking and credit-enhancing tools, and MIGA provides political insurance, especially in fragile states. Under its Small and Medium Enterprise (SME) Facility, IFC, in collaboration with the World Bank Treasury, has set up a risk-sharing facility in Sao Tome and Principe and plans to develop additional schemes for Cabo Verde and the Pacific Islands. Under the Agribusiness Facility, $16.7 million was invested in 2017 to support the Solomon Islands (tuna sector), Guinea-Bissau (fruits and vegetables), while in Bhutan, IFC has invested in a semi-green field company to produce hazelnuts for export. IFC is also providing advisory services on Public-Private Partnerships (PPPs) to nine Small States on airports, power, water and sewerage.

The IFC is also leveraging the IDA PSW, including to support housing finance in West Africa (benefitting Guinea-Bissau), risk-sharing in the Pacific, and a private sector telecom operator in Comoros. MIGA promotes private foreign investment through the provision of political risk insurance. MIGA currently supports projects in Djibouti, Gabon, Jamaica and Namibia.

DE-RISKING

De-risking is the phenomenon of financial institutions terminating or restricting correspondent banking relationships with clients or categories of clients to avoid risk. The Bank Group is supporting Small States—which are particularly vulnerable to this trend—to help address some of the causes of de-risking. One of the reasons given by large banks for de-risking is a concern about implementation of anti-money laundering standards. The Bank Group supports countries to improve the legal frameworks and supervision of these obligations, including through National Risk Assessments (NRAs) of money laundering. The Bank is preparing country studies and National Risk Assessments to identify and quantify adverse effects of de-risking on financial systems in emerging markets (for example, in Jamaica, Samoa and Tonga). Twenty Small States have received technical assistance for NRAs.

7. Blend and Gap small states are not eligible for PSW resources, unless they are classified as fragile.
In 2018, the Bank Group published a correspondent banking survey, investigating solutions to the decline in banking services in emerging markets, including Jamaica, Samoa and Tonga.

In 2018, the Bank Group published a correspondent banking survey, investigating solutions to the decline in banking services in emerging markets, including Jamaica, Samoa and Tonga.

**ATTRACTING INVESTMENTS IN THE BLUE ECONOMY**

The Bank Group is supporting the transition to a blue economy in Small States, including through a series of regional initiatives. In 2016, with Bank technical support, Grenada became the first eastern Caribbean state to develop a vision for protecting its “blue space” and to map its road toward blue growth. Under the World Bank-supported Caribbean Regional Oceanscape Project, Grenada’s model is being carried forward in Dominica, Grenada, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines.

Similarly, the Pacific Regional Oceanscape Program project is helping to strengthen the shared management of selected oceanic and coastal fisheries in the Solomon Islands, Micronesia, Marshall Islands, Tuvalu and Tonga and will expand to Kiribati. The West Africa Regional Fisheries Program and the South West Indian Ocean Fish program also support improved fisheries management in Cabo Verde, Guinea Bissau, Comoros, Maldives and Seychelles at the regional, national and community levels.

The World Bank is helping small states’ efforts to develop connectivity infrastructure to drive Digital Dividends. Significant investments in broadband infrastructure are underway, in some cases in partnership with the private sector.
ATTRACTING INVESTMENTS IN DIGITAL INFRASTRUCTURE

The World Bank is helping small states’ efforts to develop connectivity infrastructure to drive Digital Dividends. Significant investments in broadband infrastructure are underway, in some cases in partnership with the private sector.

For example, with Bank support submarine cable connections have been completed in Fiji, Samoa and Tonga (including outer islands) while work is on-going in Kiribati (including outer islands), Micronesia, and Tuvalu (pipeline). Accompanying these investments is substantial technical assistance to develop the legal and regulatory enabling environment to support market liberalization, foster new investment and upgrade of access networks (e.g. Fourth Generation Long-Term Evolution (4G/LTE)), and encourage better and cheaper services.

IV. STRENGTHENING CLIENT CAPACITY

Given their small populations, many Small States face a shortage of skills and capacity constraints, including capacity to absorb development assistance in an effective and sustainable way. The World Bank supports the strengthening of Small States’ capacity through technical assistance and training activities, the deployment of flexible operational policies and procedures to fit their specific circumstances, and implementation support on the ground.

Flexible Project Preparation and Design

Preparations Advances (PAs) are available under the Bank’s Project Preparation Facility (PPF). The funding and scope of the facility were increased in 2017 to allow for a programmatic approach to project preparation that can create economies of scale and reduce the administrative burden for clients. Currently, Micronesia is using a programmatic PA to prepare the IDA19 pipeline through a centralized implementation unit at the ministry of finance. PAs have also been approved for Kiribati, Marshall Islands, Samoa and Tonga.

In the Pacific, the World Bank has provided training to about 300 government officials in Samoa, Solomon Islands, Tonga and Vanuatu on procurement, financial management, as well as the new Environmental and Social Framework. It is also limiting the number of operations per country and ensuring minimum size ($5million). The upcoming Integrated Capacity Building Program in the Pacific will aim to strengthen project management in island states.

In the Caribbean, the World Bank is collaborating with other bilateral and multilateral partners to reduce implementation transaction costs and capacity burden on countries.

Fiduciary, Environmental, and Social standards

The Bank is providing extensive training on the procurement
The Bank has partnered with the Caribbean Development Bank to support the establishment of the Caribbean Regional Procurement Centre at the University of Technology, Jamaica. The center will support the professionalization of public procurement in the region. The center ran its first pilot course from November 2017 to May 2018 and produced its first batch of 23 students earning the International Chartered Institute of Procurement and Supply (CIPS) Level 4 Diploma in Procurement and Supply. By establishing a strong cadre of professional public procurement officers, the center will contribute to the effective use of public funds and improved delivery of public services in the Caribbean.

Supporting capacity to build climate and economic resilience

Climate resilience. The World Bank is supporting Small States’ efforts to mainstream climate smart planning and build climate resilience, including meeting their Nationally Determined Commitments (NDCs) targets and goals on climate adaptation under the COP21. It is assisting Small States to translate NDCs into policies and investments, with technical assistance ongoing in Antigua and Barbuda, Jamaica, St. Vincent and the Grenadines and Sao Tome and Principe.

Climate Action Peer Exchange (CAPE) is a forum for peer learning, knowledge sharing, and mutual advisory support. It brings together ministers and senior technical specialists from finance ministries across the world, as well as World Bank staff and other international experts, to discuss the fiscal challenges involved in implementing the Nationally Determined Contributions (NDCs) established under the 2015 Paris Agreement. CAPE is a contribution of the WBG to the NDC Partnership. Activities in Small States include:

- The Climate Action Peer Exchange (CAPE), supported by NDC Support Facility (NDC-SF), and the Eastern Caribbean Central Bank (ECCB), and jointly with Caribbean Regional Technical Assistance Centre (CARTAC) held a workshop on “Fiscal Policy for Climate Action in the Caribbean” on Jan 21-23, 2019 in the St. Kitts and Nevis. The workshop discussed fiscal reforms for a low carbon growth transition in the Caribbean, climate-informed budget processes, and debt and risk management instruments.
• CAPE provided financial and technical support to the joint **WB-IMF Climate Change Policy Assessment for St. Lucia (2018)** to help the country understand and manage the expected economic impact of climate change, while safeguarding long-run fiscal and external sustainability.

• CAPE provided financial support for the study of **Recommendations for Strengthening Fiscal Policy for Resilient, Equitable and Low-Carbon Development in Dominica (2018)**, which identified fiscal and financial reforms to improve the public finances of Dominica to help stem the fiscal challenges of reconstruction after hurricane Maria.

**Debt sustainability.** Training on the revised Debt Sustainability Framework for LICs (LIC DSF), effective July 2018, was delivered in 2019. Twenty-five SSF members benefitted from seven two-day seminars for senior officials and eight five-day workshops for technical staff on the revised LIC DSF.⁸

The World Bank Treasury also provides on-demand training to clients to build capacity to engage with insurance and capital markets to increase financing resilience to disasters. Trainings are planned in 2020 for members of the Eastern Caribbean Central Bank (ECCB). Additionally, joint World Bank-IMF assistance is planned to support the ECCB to explore options for state contingent debt instruments that would provide debt service relief to countries in the aftermath of a natural disaster to prevent short-term liquidity problems from transitioning into full debt crises.

**Implementation support on the ground**

To maximize the development impact of available resources, the World Bank is increasing the number of staff and resources deployed in fragile countries and Small States. The number of field-based staff working in SSF member countries increased by 41 percent in 2019 relative to 2016. For both fragile countries and Small States, having more staff on the ground provides client governments with enhanced support to implement Bank-financed operations.

---

More than one fifth of World Bank members are countries with a population below 1.5 million. Despite their diversity, these countries share unique vulnerabilities associated with the small size of their economies and high exposure to natural disasters and other external shocks, including the current COVID pandemic. The World Bank Group remains strongly committed to helping address Small States’ development needs through innovative approaches that fit their specific circumstances. Convening every year on the sidelines of the World Bank Group/IMF Annual Meetings, the Small States Forum will continue to provide an effective platform for dialogue and knowledge sharing on how the World Bank Group and the broader development community can best support Small States. The Forum is chaired on a rotating basis among the Caribbean, Africa, Asia and the Pacific.
