“ We need bold action on climate change. It comes down to a simple choice: we continue with business as usual and hope for the best. Or we act now and build a resilient future. Our generation may not be able to solve all the problems related to climate change, but we can do our part to leave a better planet for the next generation. ”

**Kristalina Georgieva
Chief Executive Officer
The World Bank**

INTRODUCTION

10 YEARS OF GREEN BONDS: FROM EVOLUTION TO REVOLUTION

Ten years ago, a group of Swedish pension funds – through Skandinaviska Enskilda Banken (SEB) – looked for opportunities that support climate-friendly solutions. They wanted high quality, liquid products that would not carry additional project risk. They wanted information about how their investments would achieve impact. They approached the World Bank and we worked together to design a new product. The green bond was born.

Issued in November 2008, the bond created the blueprint for today's green bond market. It was the first to define the criteria for projects eligible for green bond support; include a recognized climate research institution, CICERO, as a second opinion provider; and add impact reporting as an integral part of the process. The market has since expanded from early issuances by other multilaterals to bonds issued in a wide range of markets, currencies and structures by private companies, banks, utilities and governments.

The World Bank's first green bond received strong support from the market and interest from others, including climate policymakers, Ceres and the Climate Bond Initiative. They raised awareness for the challenges of climate change and demonstrated the potential for institutional investors to support climate-smart investments through liquid instruments without giving up financial returns. It formed the basis for the green bond principles coordinated by ICMA, the International Capital Markets Association. It highlighted the social value of fixed income investments and need for a sharper focus on transparency.

The simple concept behind green bonds is now being applied to other labeled bonds. More and more investors recognize their power to support initiatives their stakeholders care about, and the ability to do so without giving up return. They are demanding more and better data, to understand the impact of their investments. Issuers are responding: they are engaging with investors to show how their bonds present opportunities to achieve financial and social returns and are increasingly focused on refining impact measurement and reporting.

Green bonds have sparked a revolution in thinking about sustainability, purpose and potential for liquid bond investments to achieve a positive impact. The Sustainable Development Goals (SDGs) are a helpful framework for investors and issuers to focus on areas beyond climate. The World Bank has started to engage investors around specific SDGs through a series of bonds to raise awareness for specific development challenges through its sustainable development bonds. Other issuers are following.

As we mark ten years of green bonds, we are proud of the role we played in sparking a sustainability revolution in the market. We are also deeply grateful for the support and vision of investors and partners in the market who are driving innovation and sustainable solution. Investors in World Bank green bonds have helped global energy savings equivalent to Chile's power consumption in 2015; supported reforestation projects in Mexico that have resulted in CO₂ emission reductions equivalent of 1.5 million barrels of oil consumed, and prevented 4,800,000 tons annually of untreated wastewater from following into rivers in China.

The challenge now is to ensure that we harness the revolution and momentum towards achieving the SDGs. In the future, for every investment, investors will be asking "how is this making a positive impact to society?" and will expect solid impact data as a response. There's a long way to go. But recognizing the urgency for action and the power of investment, collaboration, data and innovation will get us there.

PROJECT SUMMARY

The mission of the World Bank (International Bank for Reconstruction and Development, IBRD) is to end extreme poverty and promote shared prosperity in a sustainable manner. Tackling climate change plays a critical role in achieving these goals. Through World Bank Green Bonds, investors make an impact by supporting the financing of a wide range of projects across many sectors that are addressing climate change around the world.

ISSUANCE

In the past 10 years, the World Bank has issued 147 green bonds in 20 currencies for approximately US\$11 billion in funding to support the transition to low-carbon and climate resilient growth. As of June 30, 2018, US\$4.8 billion of Green Bonds were outstanding.

COMMITMENTS AND DISBURSEMENTS

At the end of the fiscal year 2018, there were 91 eligible projects and a total of US\$15.4 billion in commitments. Of these commitments, US\$8.5 billion in Green Bond proceeds were allocated and disbursed to support projects in 28 countries and another US\$6.8 billion had yet to be disbursed.

By Sector

As of June 30, 2018, Renewable Energy and Energy Efficiency and Clean Transportation projects represented the largest sectors in the Green Bond eligible project portfolio. Together, these sectors made up approximately 69% of Green Bond commitments.

Amounts in Eq. US\$ billion (may not add up due to rounding)	Committed ^{a/}			Allocated and Outstanding ^{b/}
	Mitigation	Adaptation	Total	
Renewable Energy and Energy Efficiency	6.1	0.1	6.1	3.7
Clean Transportation	5.0	0.2	5.2	2.2
Water and Wastewater	0.1	1.2	1.3	0.8
Solid Waste Management	0.1	0	0.1	0.1
Agriculture, Land Use, Forests, and Ecological Resources	0.5	1.2	1.8	0.9
Resilient Infrastructure, Built Environment and Other	0.3	0.7	0.9	0.7
Total	12.0	3.4	15.4	8.5
Percentage	78%	22%	100%	

Notes:

a/ Committed amount net of cancellations for eligible projects for which the loans are disbursing.

b/ Green Bond proceeds allocated to support financing of disbursements to eligible projects net of loan repayments. Not adjusted for matured bonds that were not replaced with new green bonds.

By Region

As of June 30, 2018, the East Asia and Pacific Region, at 38%, was the largest regional exposure by share of commitments in the Green Bond eligible project portfolio.

Amounts in Eq. US\$ billion (may not add up due to rounding)	Committed ^{a/}	Allocated & Outstanding ^{b/}
East Asia & Pacific (EAP)	5.9	3.0
Europe & Central Asia (ECA)	1.9	1.3
Latin America & Caribbean (LAC)	3.9	2.6
Middle East & North Africa (MNA)	0.9	0.3
South Asia (SAR)	2.8	1.4
Total	15.4	8.5

Notes:

a/ Committed amount net of cancellations for eligible projects for which the loans are disbursing.

b/ Green Bond proceeds supporting financing of disbursements to eligible projects net of loan repayments. Not adjusted for matured bonds that were not replaced with new green bonds.

PROJECT IMPACT HIGHLIGHTS

91 WORLD BANK PROJECTS ELIGIBLE FOR GREEN BOND FINANCING

5 ADDITIONAL PROJECTS COMPLETED IN FY18 FOR A TOTAL OF **30**

16

RENEWABLE ENERGY & ENERGY EFFICIENCY PROJECTS COMPLETED (3 IN FY18)

68,050 GWh
IN ANNUAL ENERGY SAVINGS

EQUIVALENT TO

THE TOTAL ELECTRICITY CONSUMED IN 2015 IN CHILE ABOUT 50,644 TONS OF CO₂ EQUIVALENT AVOIDED

6,580 GWh
ANNUAL ENERGY PRODUCED FROM RENEWABLE RESOURCES

EQUIVALENT TO

THE TOTAL POWER GENERATED BY 1,240 WIND TURBINES RUNNING FOR ONE YEAR IN THE US

2,094 MW
RENEWABLE CAPACITY FROM SOLAR, WIND, AND HYDRO TECHNOLOGIES

EQUIVALENT TO

CO₂ EMISSION FROM 780 TONS OF BURNED COAL AVOIDED EVERY YEAR

24,400
RURAL HOUSEHOLDS ARE ELECTRIFIED BY SOLAR VOLTAIC SYSTEMS IN MEXICO & PERU

8

WATER, WASTEWATER & SOLID WASTE MANAGEMENT PROJECTS COMPLETED (1 IN FY18)

442,650 HECTARES
WITH NEW, REHABILITATED OR RESTORED IRRIGATION SERVICES IN THE DOMINICAN REPUBLIC, TUNISIA & INDONESIA

4,800,000 TONS
OF UNTREATED WASTEWATER PREVENTED FROM FLOWING INTO RIVERS ANNUALLY IN CHINA

28 WASTE DUMPS
IN BRAZIL & MOROCCO CLOSED OR REHABILITATED

4

AGRICULTURE, LAND USE, FORESTS, ECOLOGICAL RESOURCES, RESILIENT INFRASTRUCTURE & BUILT ENVIRONMENT PROJECTS COMPLETED

774,600 HECTARES
OF FOREST RESTORED OR REFORESTED IN CHINA & MEXICO

6,000,000 TONS
OF CO₂ EMISSIONS REDUCED DUE TO REFORESTATION IN MEXICO

EQUIVALENT TO

1.2 MILLION CARS OFF THE ROAD FOR ONE YEAR

6,600,000 PEOPLE
BENEFITED FROM FLOOD PROTECTION IN CHINA

15% INCREASE
IN CATASTROPHE INSURANCE COVERAGE IN MACEDONIA & SERBIA

2

CLEAN TRANSPORTATION PROJECTS COMPLETED (1 IN FY18)

25% DECREASE
IN TRAVEL TIME FOR 4 MILLION PUBLIC TRANSPORT PASSENGERS

+

A FLEET OF **52,000 BICYCLES** IMPLEMENTED

BOTH IN XI'AN, CHINA

40% INCREASE
IN ANNUAL PASSENGER-TRIPS

+

ADDITIONAL **60,000 PEOPLE** WITH ACCESS TO QUALITY URBAN TRANSPORT SERVICES

BOTH IN XINJIANG, CHINA

WORLD BANK GREEN BOND PROCESS

Green Bond Eligible Projects

All World Bank bonds support sustainable development because the net proceeds from the sale of the bonds are used by the World Bank (IBRD) to support financing of sustainable development projects and programs in IBRD's member countries. They fit well within all investor mandates, especially investment strategies that incorporate environmental, social and governance factors. The World Bank Green Bonds are a subset of its sustainable investment opportunities. Green Bond eligible projects promote the transition to low-carbon and/or climate resilient growth in World Bank client countries targeting climate change mitigation and adaptation. The World Bank's eligibility criteria were independently reviewed by the Center for International Climate and Environmental Research at the University of Oslo (CICERO).

Two-Stage Process to Identify Green Bond Eligible Projects

1. All projects supported by the World Bank go through a rigorous review and approval process to ensure that they meet countries' development priorities. The process includes: (i) early screening to identifying potential environmental or social impacts and designing policies and concrete actions to mitigate any such impacts; and (ii) approval by the Board of Executive Directors – a resident board with 25 chairs representing member countries.
2. Environmental specialists then screen approved World Bank projects to identify those that meet the World Bank's Green Bond eligibility criteria.

For more information about the World Bank Green Bond implementation guidelines and the eligibility criteria, see <http://pubdocs.worldbank.org/en/217301525116707964/Green-Bond-Implementation-Guidelines.pdf>.

CLIMATE CHANGE PROJECT EXAMPLES

MITIGATION

SOLAR AND WIND INSTALLATIONS

FUNDING FOR NEW TECHNOLOGIES THAT PERMIT SIGNIFICANT REDUCTIONS IN GREENHOUSE GAS EMISSIONS

REHABILITATION OF POWER PLANTS AND TRANSMISSION FACILITIES TO REDUCE GREENHOUSE GAS EMISSIONS

GREATER EFFICIENCY IN TRANSPORTATION, INCLUDING FUEL SWITCHING AND MASS TRANSPORT

WASTE MANAGEMENT (METHANE EMISSION) AND CONSTRUCTION OF ENERGY-EFFICIENT BUILDINGS

CARBON REDUCTION THROUGH REFORESTATION AND AVOIDED DEFORESTATION

ADAPTATION

PROTECTION AGAINST FLOODING (INCLUDING REFORESTATION AND WATERSHED MANAGEMENT)

FOOD SECURITY IMPROVEMENT AND IMPLEMENTING STRESS-RESILIENT AGRICULTURAL SYSTEMS (WHICH SLOW DOWN DEFORESTATION)

SUSTAINABLE FOREST MANAGEMENT AND AVOIDED DEFORESTATION

IMPACT REPORTING

The World Bank is committed to transparent reporting of its green and climate-related financing, including the projects that are part of its Green Bond program. Detailed information for all World Bank financed projects is available on the World Bank website <http://projects.worldbank.org>. Project summaries and impact indicators for Green Bond eligible projects are summarized on the investor website at: <http://treasury.worldbank.org/en/about/unit/treasury/ibrd/ibrd-green-bonds>.

The following section lists the 91 World Bank eligible projects supported by the financing of World Bank Green Bonds as of June 30, 2018. The projects are organized by sector. Selected results indicators, World Bank loan amount, share of loan amount to total project costs, and the amount of Green Bond proceeds that have been allocated to support disbursements to each project are disclosed. Annex 1 describes the reporting approach and should be read in conjunction with this report.

Interpreting Reported Results

The intention of impact reporting is to help investors develop a more detailed understanding of the climate and environmental impacts that can be expected or projected to result from Green Bond eligible projects. Several key results indicators have been selected and where possible quantified, but it is important to appreciate the inherent limitations of data reported. The main considerations to adequately interpret results are:

- **Scope of results:** Reporting is based on “ex-ante” estimates of climate and environmental impacts at the time of project appraisal and mostly for direct project effects, except as indicated where the results have been updated for actual results at the time of project completion.

- **Uncertainty:** An important consideration in estimating impact indicators and projecting results is that they are based on assumptions. While technical experts aim to make sound and conservative assumptions that are reasonable based on the information available at the time, the actual environmental impact of the projects generally diverge from initial projections. In general, behavioral changes or shifts in baseline conditions can cause deviations from projections.
- **Comparability:** Caution should be taken in comparing projects, sectors, or whole portfolios because baselines (and base years) and calculation methods may vary significantly. In addition, the cost structures between countries will also vary, so that developing cost-efficiency calculations (such as results per dollar invested) could, for example, place smaller countries with limited economies of scale at a disadvantage and will not take into consideration country-specific context.
- **Omissions and qualitative results:** Because the selected projects aim to provide social and developmental benefits as well as climate and environmental ones, they will have impacts across a much wider range of indicators than captured in the next section. Therefore, exclusively focusing on the reported indicators will leave out other important development impacts. Where quantitative data is unavailable, qualitative indicators have been included to illustrate other beneficial impacts.

To better understand the developmental impacts of projects and the broader country context, please view the full project documentation available on the World Bank website at <http://projects.worldbank.org/>.

ELIGIBLE PROJECTS BY SECTOR

Target Results and Committed and Allocated Amounts

RENEWABLE ENERGY AND ENERGY EFFICIENCY

CLEAN TRANSPORTATION

WATER AND WASTEWATER

SOLID WASTE MANAGEMENT

AGRICULTURE, LAND USE, FORESTS, AND ECOLOGICAL RESOURCES

RESILIENT INFRASTRUCTURE, BUILT ENVIRONMENT, AND OTHER

Results should be read in conjunction with Annex 1, which describes the reporting approach.

RENEWABLE ENERGY AND ENERGY EFFICIENCY

Amounts may not add up due to rounding.

ANNEX 1: IMPACT REPORTING APPROACH

When the World Bank issued its first Green Bond Impact Report in 2015, the initial reporting template and set of indicators presented were the product of engagement with investors, which benefitted from the efforts of multilateral development banks to harmonize metrics for GHG accounting and reporting on climate finance activities. The World Bank led a collaborative initiative with other issuers to create the first harmonized template with core indicators for the Renewable Energy and Energy Efficiency sectors that was published in March 2015. It has since evolved and been adopted by many other issuers. This consultative process of developing harmonized impact reporting templates has advanced under the auspices of the Green Bond Principles and its working groups and continues to evolve to cover other indicators and relevant sectors.

The indicators for this report have been selected among other expected development results and are intended to illustrate the type and scale of expected results in a variety of sectors and country contexts. To better reflect individual country challenges, demands, and resources, the report focuses on presenting a diverse set of countries, projects and sectors rather than cumulative impacts. Because of the limited comparability between projects, sectors and countries (see "Interpreting Reported Results" in "World Bank Green Bond Process" section and "No aggregation of GHG estimates" on the adjacent page), impact results are not aggregated, with the exception of "renewable energy capacity added", which is deemed to be broadly comparable.

World Bank Green Bond Eligible Projects: Six Sectors

This impact report is organized according to the six sectors represented in the World Bank's Green Bond eligible projects portfolio. Where projects cover multiple sectors, the project is included in the main sector only, but target results will include all components of the project.

The reporting frameworks adopted identify core indicators for the following sectors: (1) Renewable Energy and Energy Efficiency; (2) Clean Transportation; (3) Water and Wastewater; and (4) Solid Waste Management. Where information covering the proposed core indicators is publicly available, it is included.^{a/} However, for some projects quantitative estimates for these indicators are either not available or not applicable. A few other indicators that are considered relevant for Green Bond investors are also provided.

Projects categorized in the remaining sectors are more heterogeneous. The report provides project specific indicators based on available information on the scale of results.

Notes:

a/ This impact report has been prepared following an approach developed in collaboration with 11 other International Finance Institutions (IFIs) to encourage greater harmonization in impact reporting. Core indicators for other sectors were not recommended as part of initial efforts to work towards a harmonized approach for impact reporting. See the 2017 Joint Report on Multilateral Development Banks' Climate Finance at <http://pubdocs.worldbank.org/en/540921538149778203/2017-joint-report-on-mdbbs-climate-finance.pdf>.

Key Assumptions and Approach

The following key assumptions and approach were used in preparing this report.

- **Ex-ante projections:** Quantitative estimates for target results represent ex-ante projections developed during project design mostly for direct project impacts once projects are at normal operating capacity. The target results include expected results for projects still in the preparation, construction and/or implementation phase. The impact report thus serves as an illustration of expected results made possible through Green Bond eligible projects, but it is not intended to and does not provide actual results achieved in a specific year or reporting period. Target results have been updated with actual results at project completion when the final project commitment is materially different to the original authorized amount. Where the amounts are based on actual results this is noted in the preceding tables.
- **Length of time projects are on report:** Impact reporting will be provided for projects for so long as they are part of the World Bank Green Bond program. This means that projects are added to the impact report once Green Bond proceeds have been allocated to support the financing of disbursements to the project, and removed once the client has repaid the respective loan. Projects may also be removed from future reports if the World Bank decides to remove a project from its Green Bond program.¹ If a project is removed from the Green Bond program, any Green Bond proceeds previously allocated to support the financing of disbursements to that project will be credited back to the Special Account for Green Bond proceeds and allocated to support the financing of disbursements to other Green Bond eligible projects as part of the routine allocation process.
- **Reporting for co-financed projects:** The World Bank often co-finances projects with the client country and/or other lenders. The results for the individual project are based on the total project including all financiers. The World Bank's share of the total financing is included for each project.
- **Partial project eligibility:** In cases where a project is only partially Green Bond eligible, the committed amount reported reflects only that portion that is Green Bond eligible. Allocations to support disbursements to such projects are made on a pro rata basis.
- **No aggregation of GHG estimates:** When reported in the "Project Appraisal", "Implementation Status and Results", and/or "Implementation Completion and Results" reports, the GHG emission reductions for projects are reported in tons of CO₂ equivalent. The World Bank is undertaking an effort in conjunction with other International Finance Institutions to harmonize the approaches for GHG accounting.² At the same time, the World Bank is working to develop internally consistent GHG accounting methodologies for investment projects across relevant sectors. Given these on-going developments in GHG accounting, the basis for estimating CO₂ equivalent emission reductions may vary between World Bank projects. Therefore, the World Bank does not recommend aggregating the results of different projects in its Green Bond portfolio.
- **All reported results are from publicly available sources:** Reporting is based on publicly available impacts for the projects disclosed in "Project Appraisal", "Implementation Status and Results", and "Implementation Completion and Results" reports. To facilitate comparability of the reported results, the reporting units have been converted where such conversion is based on a standard conversion factor.

¹ As part of the World Bank's due diligence in monitoring projects included in its Green Bond program, it may elect to remove a project. Possible reasons for removing a project from a Green Bond program include, but are not limited to, cancellation of the project or significant implementation delays.

² For more information on the harmonization framework, see <http://pubdocs.worldbank.org/en/540921538149778203/2017-joint-report-on-mdbs-climate-finance.pdf>.

ANNEX 2:

WORLD BANK PROJECT CYCLE

The World Bank project cycle (see diagram 1) consists of six stages: Identification, Preparation, Appraisal, Negotiation/Approval, Implementation/Support, and Completion/Evaluation (see below for the detailed descriptions).

Projects that are reviewed for eligibility under the World Bank Green Bond program are selected from among all projects approved by the World Bank Board of Directors (see diagram 2). They therefore represent a subset of the World Bank's lending portfolio. As of June 30, 2018, there were 91 projects in the Green Bond program.

1 Project Identification

The World Bank works with a borrowing country's government on a **Country Partnership Framework** that identifies the country's priorities for reducing poverty and improving living standards. Within those priorities, the World Bank and the government agree on a project concept, which is outlined in a **Project Concept Note**. The **Project Information Document** outlines the project's scope, and the **Integrated Safeguards Data Sheet** identifies potential environmental and social issues.

2 Project Preparation

The borrower leads project preparation, with the World Bank generally taking an advisory role. If necessary, the borrower prepares an **Environmental Assessment Report** that describes the project's likely environmental impact and steps to mitigate possible harm. If there are major issues, the borrower prepares an **Environmental Action Plan**. An analysis of a project's potentially adverse effects on indigenous peoples may also be undertaken, and any issues are addressed in the **Indigenous Peoples Plan**.

3 Project Appraisal

The government and the World Bank review the identification and preparation documents and confirm the expected project outcomes, intended beneficiaries and evaluation tools, as well as the project's readiness for implementation. The **Project Information Document** is updated and released when the project is approved for funding.

4 Project Approval

The project team prepares the **Project Appraisal Document** (for investment project financing) or the Program Document (for development policy financing), along with other financial and legal documents, for submission to the World Bank's Board of Executive Directors for approval. When approval is obtained and the legal documents are signed, the implementation phase begins.

5 Project Implementation

The borrower implements the project with technical assistance and support from the World Bank as needed. Twice a year, the government and the World Bank prepare a review of project progress, the **Implementation Status** and **Results Report**.

6 Project Completion and Evaluation

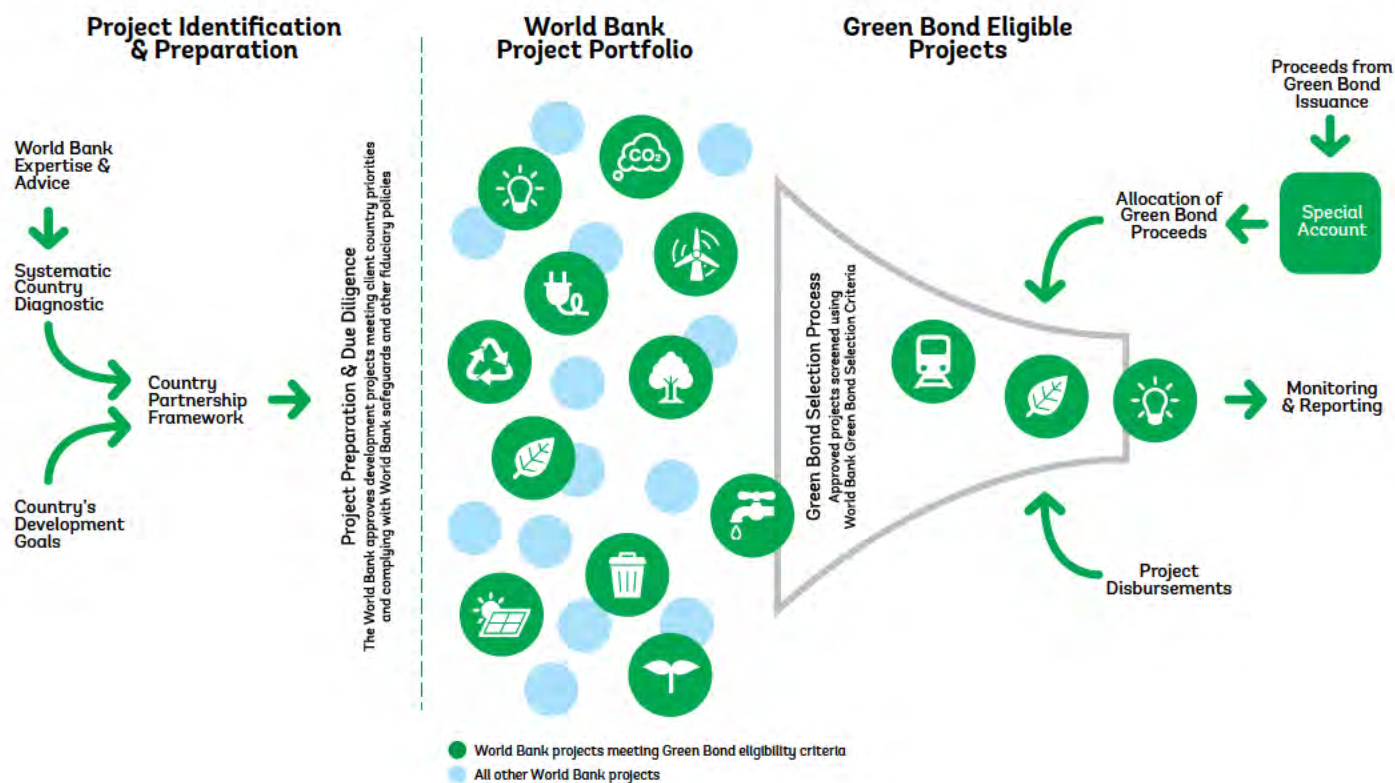

When a project is completed and closed, a World Bank operations team prepares an **Implementation Completion** and **Results Report**. The final outcomes are compared to expected results. The team also assesses how well the project complied with the Bank's operations policies, and accounts for the use of Bank resources.

The World Bank's Independent Evaluation Group (IEG) assesses the performance of roughly one project out of four projects a year, measuring outcomes against the original objectives, sustainability of results and institutional development impact. IEG may produce **Impact Evaluation Reports** to assess the economic worth of projects and the long-term effects on people and the environment.
