PROJECT NAME

Assessment of Forest Landscape Restoration Opportunities

GRANT OBJECTIVE AND ACTIVITIES

This project aims to develop an evidence-based roadmap and action plan for forest landscape restoration (FLR) to support Armenia in implementing mitigation actions in its Nationally Determined Contribution. The roadmap would help identify priority areas for restoration, financing needs and sources, roles of different stakeholders as well as knowledge gaps. The results of this exercise would be shared with national policymakers and local actors across sectors. Key project activities include conducting i) an assessment of the legal framework for restoration, ii) a biodiversity study to assess potential species, iii) a survey of private sector participation potential, iv) technical feasibility and cost analysis and v) restoration potential mapping based on satellite data. Armenia is a member of the NDC Partnership. This project is supported as part of the NDC **Partnership's Climate Action Enhancement Package** (CAEP).
