CTommodity prices were generally lower in March. Petroleum prices peaked at $\$ 32 / \mathrm{bbl}$ on March 7, and then fell below $\$ 25 / \mathrm{bbl}$ by month's end, in anticipation of higher OPEC production. OPEC met March 27-29 and agreed to raise quotas by $1.7 \mathrm{mb} / \mathrm{d}$ April 1 (this includes a proportional increase for Iran, although the country was not a party to the agreement). Mexico and Norway also announced they will increase production by 0.15 $\mathrm{mb} / \mathrm{d}$ and $0.10 \mathrm{mb} / \mathrm{d}$, respectively. As OPEC was exceeding quotas by about $1.1 \mathrm{mb} / \mathrm{d}$ in March, the net increase of "new" supply is expected to be about $1.2 \mathrm{mb} / \mathrm{d}$, assuming some overproduction and higher output from Iraq.

Non-energy commodity prices declined $\mathbf{1 . 6}$ percent in March following a slight decline in February. The decline is seen as a pause in the general trend of price increases expected for non-energy commodity prices this year. The recovery of prices has been modest since the cyclical low last July, with non-energy prices up only 4.2 percent. Most of this increase has come from metals which reached a low one year ago while agricultural commodities are up less than 1.0 percent since their low last July. Agricultural commodities prices were down 1.4 percent in March, relative to February.

Metals and minerals prices fell $2.3 \%$ amid high stocks, rising supplies and some concern about the strength of world demand. Aluminum recorded the largest decline of $5.6 \%$. Gold prices fell $4.5 \%$ because of actual and prospective sales from central banks, as well as forward

Percentage Change in Price Indices
February 2000 - March 2000

sales by gold producers. Bucking these trends were further increases in the prices of steel, nickel and zinc, led by strong growth in steel demand and extreme tightness in nickel supplies.

Trade volumes have begun to increase for many agricultural commodities and this is expected to support prices as stock levels for most commodities continue to decline. Trade increases are coming from several groups of countries, including the oil exporting countries which are benefiting from higher oil prices, the Asian crisis countries which are recovering from the 1997-98 economic slump, and the former Soviet Union countries especially Russia which has benefited from higher oil prices as well as an overall improvement in its economic situation.

## Major Movers in March

Aluminum prices declined $5.6 \%$ following a squeeze on the LME. Aluminum stocks have declined recently but this is merely a reversal of the in-flow of material when the market was in backwardation, and does not represent a tightness of supply.

Cocoa prices gained $8.1 \%$ in March mainly reflecting the slowing of West Africa's main crop arrivals. Following good mid-crop forecasts, arrivals are expected to regain strength and thus put downward pressure on prices again.

Coconut oil and palmkernel oil prices declined $6.6 \%$ and $4.1 \%$, respectively, in March due to large palm kernel oil production. This is the third consecutive monthly setback in lauric oils prices.

Coffee robusta prices declined 5.3\% in March following reports that production by both Asian and African coffee producers will exceed earlier expectations. Arabica prices declined $2.6 \%$, with the prospects of another record crop (currently estimated to exceed 107 million bags). Brazil and Colombia, the world's top coffee producers, are reportedly contemplating a supply retention program, but the details are not known yet.

Cotton prices increased an additional 6.6\% in March to reach 126 cents $/ \mathrm{kg}$, almost $30 \%$ higher than their December ' 9915 -year low. The recovery is expected to continue on recent estimates that consumption will exceed production by 1.3 million tons while stocks will decline by 1.4 million tons in the 2000/01 season.

Gold prices fell $4.5 \%$, ending the month slightly above $\$ 275 /$ toz, as planned and rumored sales by several central banks weighed heavily on prices. The UK sold 25 tons on March 21, its fifth such auction under a plan to ultimately sell 415 tons of gold reserves.

Natural gas prices in the US rose $5.3 \%$ on declining inventories and expectations of a tightening market this summer due to strong demand and only modest growth in domestic supplies. Gas prices in Europe soared $19 \%$ because of higher oil prices, as imported gas into Europe is indexed to petroleum prices.

Nickel prices leapt a further $6.5 \%$ due to strong demand for steel and an extremely tight nickel market, brought on by very low stocks, labor disputes, and supply problems at new mines.

Palm oil prices gained 5.4\% in March, despite good production prospects. Demand growth appears to be the driving force behind the price increase. Soybean oil prices also gained $1.4 \%$.

Rice prices fell $6.3 \%$ on news that Indonesia banned rice imports until June to protect local farmers from falling prices during the April harvest. This decision raised concerns that the policy may affect orders previously placed by Indonesia's State Logistics Agency. And given the already weak import demand situation, rice prices weakened further on the announcement.

Sugar prices fell $3.9 \%$ on reduced imports by Russia and announced increases in sugar import duties by India and Russia.

Tea prices fell 3.5\% (three auctions average) due to the weak market in Calcutta, where leaf prices sank to end-of-season lows as mostly poor quality offerings met with nominal export and domestic demand.

Timber prices were mixed, with Malaysian logs up $3.7 \%$ after dropping by $4.8 \%$ in February when prices fell due to slow trade during the Chinese New Year. West African sapeli log were slightly lower.
